2.10. Measurement of mitochondrial membrane potential 38
2.11. Measurement of cytochrome c release 39
2.12. Measurement of caspase activity 40
2.13. NF-κB activation 41
2.14. Protein estimation 42
2.15. Immunofluorescence for NF-κB p65 translocation 42
2.16. Determination of Activator protein-1 activation 43
2.17. Western blotting 43
2.18. RNase protection assay (RPA) 44
2.19. Analysis of Fas surface expression 45
2.20. Measurement of Reactive Oxygen Intermediates (ROI) 45
2.21. Statistical analysis 46

Chapter 3  47-56

Study of apoptotic potential of nitric oxide and its mechanism

3.1. Introduction 47

3.2. Results

3.2.1. SNP shows cytotoxic activity against HuT-78 cells 48
3.2.2. SNP increases nitrite level in dose and time dependent manner 48
3.2.3. SNP induces apoptosis in HuT-78 49
3.2.4. SNP causes chromatin condensation and DNA fragmentation 49
3.2.5. SNP induces loss of mitochondrial membrane potential 50
3.2.6. SNP causes cytochrome c release in HuT-78 cells 50
3.2.7. SNP induces caspase 3 and 9 activation 51
3.2.8. SNP causes PARP cleavage in HuT-78 cells 51
3.2.9. SNP suppresses constitutive NF-κB 51
3.2.10. SNP inhibits nuclear translocation of p65 52
3.2.11. NF-κB inhibitor curcumin induces apoptosis in HuT-78 cells 52
3.2.12. SNP downregulates antiapoptotic protein Bcl-xl 53
3.2.13. HuT-78 cells are resistant to apoptosis by exogeneous TNF-α 53

3.3. Discussion 54
Study of apoptotic potential of pentoxifylline and its mechanism

4.1. Introduction 57

4.2. Results

4.2.1. PTX shows cytotoxic activity against HuT-78 cells 57
4.2.2. PTX is not cytotoxic towards normal lymphocytes 58
4.2.3. PTX induces apoptosis in HuT-78 cells 58
4.2.4. PTX causes chromatin condensation and DNA fragmentation 59
4.2.5. PTX changes mitochondrial membrane potential 59
4.2.6. PTX causes cytochrome c release in HuT-78 cells 60
4.2.7. PTX induces caspase 9 and 3 activation and PARP cleavage 60
4.2.8. PTX suppresses Bcl-xl and c-FLIP protein expression in HuT-78 cells 61
4.2.9. PTX affects Bcl-xl, GADD45, c-Fos and Mcl-1 mRNA expression 61
4.2.10. PTX does not have any effect on constitutive NF-κB activation 62
4.2.11. PTX enhances activator protein-1 DNA binding activity 63
4.2.12. PTX upregulates Fas and TRAIL mRNA expression 63
4.2.13. PTX upregulates Fas expression at cell surface 63
4.2.14. PTX scavenges reactive oxygen intermediate (ROI) 63
4.2.15. FasL shows cytotoxic activity against HuT-78 cells 64
4.2.16. PTX enhances FasL mediated killing 65
4.2.17. PTX enhances FasL mediated apoptosis 65
4.2.18. PTX mediated apoptosis is independent of cyclic cAMP 66
4.2.19. SNP did not enhance PTX mediated cytotoxicity 66

4.3. Discussion 66

Chapter 5
