Chapter

4.13 Protein concentration in seed ......................... 85
4.14 Zinc concentration in top half of the plant .......... 88
4.15 Nitrogen concentration in straw ....................... 92
4.16 Zinc concentration in straw .......................... 94
4.17 Zinc concentration in seed ............................ 97
4.18 Nitrogen accumulation in straw ....................... 101
4.19 Nitrogen accumulation in seed ......................... 104
4.20 Zinc accumulation in straw ............................ 107
4.21 Zinc accumulation in seed ............................ 114
4.22 Straw yield ........................................ 118
4.23 Seed yield .......................................... 124
4.24 Harvest index ....................................... 127

V DISCUSSION ........................................... 131-163

5.1 Plant population ........................................ 131
5.2 Morphological characters ............................... 132
5.3 Phenological observations ............................... 136
5.4 Yield attributing parameters ............................ 137
5.5 Dry matter production .................................. 142
5.6 Protein and oil concentration in seed .................. 146
5.7 Concentration of nutrients and their accumulation in crop .................................................................. 149
5.8 Straw and seed production ................................ 154
5.9 Harvest index .......................................... 159
5.10 Economics of treatments ................................ 161

VI SUMMARY .............................................. 164-170

BIBLIOGRAPHY ........................................... 171-186

APPENDICES ............................................. i-xiv
