List of figures

Chapter I
1.1 A model for the biogeochemical cycling of organotins

Chapter III
3.1 Geographical location of sampling sites
3.2 Phenogram showing similarity among different isolates
3.3 Growth pattern of TBTC resistant isolates on MSM agar supplemented with 2mM TBTC
3.4 Optimum temperature for growth of five isolates grown in MSM + 2mM TBTC
3.5 Optimum pH for growth of five isolates grown in MSM + 2mM TBTC
3.6 Optimum NaCl concentration for growth of five isolates grown in MSM + 2mM TBTC
3.7 Survival of *Pseudomonas aeruginosa* strain USS25 exposed to selected heavy metals
3.8 Survival of *Pseudomonas aeruginosa* strain 25B exposed to selected heavy metals
3.9 Survival of *Pseudomonas stutzeri* strain 9(3A) exposed to selected heavy metals
3.10 Survival of *Pseudomonas fluorescens* strain USS25 exposed to selected heavy metals
3.11 Survival of *Pseudomonas aeruginosa* 5Y2 exposed to selected heavy metals
3.12 Survival of *Pseudomonas aeruginosa* strain USS25 in various antibiotics
3.13 TBTC tolerance limit of *Pseudomonas aeruginosa* strain USS25 in MSM

Chapter IV
4.1 Growth behaviour of *Pseudomonas aeruginosa* strain USS25 in Luria Bertani broth and Luria Bertani broth + TBTC (2mM)
4.2 Growth behaviour of *Pseudomonas aeruginosa* strain USS25 in Zobell Marine Broth and Zobell Marine Broth + TBTC (2mM)
4.3 Optimum concentration of carbon sources for the growth of *Pseudomonas aeruginosa* strain USS25
4.4 Growth behaviour of *Pseudomonas aeruginosa* strain USS25 in MSM + glycerol (3.5%) and MSM + glycerol (3.5%) + TBTC(2mM)
4.5 Growth behaviour of *Pseudomonas aeruginosa* strain USS25 in MSM + succinate (3%) and MSM + succinate (3%) + TBTC(2mM)
4.6 Growth behaviour of *Pseudomonas aeruginosa* strain USS25 in MSM + glycerol (3.5%) + succinate (3%) and MSM + glycerol (3.5%) + succinate (3%) + TBTC (2mM)
4.7 Growth of *Pseudomonas aeruginosa* strain USS25 in presence of 2mM TBTC with/without ethanol
4.8 Optimum concentration of nitrogen source for the growth of *Pseudomonas aeruginosa* strain USS25
4.9 Uptake of TBTC by *Pseudomonas aeruginosa* strain USS25 in different media

4.10 Absorbance spectra (190-400nm) of chloroform extract of bacterial cells grown in (a) MSM + 2mM TBTC only, (b) MSM + 2mM TBTC + 3% Succinate, (c) MSM + 2mM TBTC + 3.5% Glycerol, (d) MSM + 2mM TBTC + 3% Succinate + 3.5% Glycerol

4.11 TBTC degradation profile of *Pseudomonas aeruginosa* strain USS25

4.12 TBTC degradation profile of *Pseudomonas aeruginosa* strain USS25 (time course study)

4.13 TBTC degradation profile of *Pseudomonas aeruginosa* strain USS25 in presence of succinate (3%) and glycerol (3.5%)

4.14 Gas Chromatogram of culture suspension showing production of dibutyltin form tributyltin by *Pseudomonas aeruginosa* strain USS25

4.15 IR spectra of (a) standard TBTC and (b) degradation product

4.16 1H NMR spectra of (a) standard TBT and (b) degradation product

4.17 Structures of TBTC, DBT and degradation product (monobutyltin)

4.18 Effect of thiol (mercapto-ethanol) and chelating agent (EDTA-Na₂) on growth of *Pseudomonas aeruginosa* strain USS25 in MSM + 2mM TBTC

4.19 Effect of thiol and EDTA-Na₂ on TBTC toxicity of *Pseudomonas aeruginosa* strain USS25 in MSM

4.20 Exopolymer production of *Pseudomonas aeruginosa* strain USS25 in different media

4.21 Surfactant activity of exopolymer in Benzene-Water system

4.22 Effect of TBTC on surfactant activity on EPS of *Pseudomonas aeruginosa* strain USS25 (Benzene-water system)

4.23 Effect of TBTC on surfactant activity of bacterial EPS in Chloroform-Water system

4.24 Effect of TBTC on surfactant activity of bacterial EPS in Benzene-Water system

4.25 CMC value of EPS

4.26 Cells of *Pseudomonas aeruginosa* strain USS25 showing enhanced production of green pigment on MSM agar supplemented with TBTC

4.27 Effect of TBTC on green fluorescent pigment production of *Pseudomonas aeruginosa* strain USS25

4.28 Effect of TBTC on fluorescent pigment produced by *Pseudomonas aeruginosa* strain USS25

4.29 Fluorescent pigment of *Pseudomonas aeruginosa* strain USS25 under UV light

4.30 Spectrofluorimetric analysis of fluorescent pigment produced by *Pseudomonas aeruginosa* strain USS25

4.31 Protein profile of *Pseudomonas aeruginosa* strain USS25 (SDS-PAGE)
Chapter V

5.1 Plasmid profile of *Pseudomonas aeruginosa* strain USS25
5.2 Restriction mapping of plasmid DNA of *Pseudomonas aeruginosa* strain USS25
5.3 Survival of *Pseudomonas aeruginosa* strain USS25 in presence of acridine orange
5.4 Plasmid profile of *Pseudomonas aeruginosa* strain USS25 after subsequent curing with acridine orange
5.5 Survival of *Pseudomonas aeruginosa* strain USS25 in presence of NTG at regular interval at different concentration.
5.6 Growth behaviour of parent and NTG mutant strain of *Pseudomonas aeruginosa* strain USS25 in MSM+ 5mM TBTC and MSM+ 10mM TBTC
5.7 Comparison of TBTC degradation profile of *Pseudomonas aeruginosa* strain USS25 (wild type strain) and NTG induced mutant.
