LIST OF FIGURES

1.1 Object Oriented v/s Component Based Technology
1.2 A Software Component with a plug
1.3 Structured and Object Oriented Approach
1.4 Component Based Approach
2.1 Market Researchers’ report about Component Market Growth
4.1 Component Control Flow Graph
4.2 Component Transition Probabilities
4.3 Impact of Reliability of Component No. 1 on System Reliability
4.4 Impact of Reliability of Component No. 2 on System Reliability
4.5 Impact of Reliability of Component No. 3 on System Reliability
4.6 Impact of Reliability of Component No. 4 on System Reliability
4.7 Comparative Analysis of Component Reliabilities v/s System Reliability
4.8 Histogram for the Impact of different Component’s Reliabilities on overall System Reliability
4.9 Number of Components v/s System Reliability
5.1 Component Execution Graph (CEG) (Case 1)
5.2 Means of Execution Links (Case 1)
5.3 Standard Deviations of Execution Links (Case 1)
5.4 Criticality Indices of Execution Links (Case 1)
5.5 Criticality Indices of Components (Case 1)
5.6 Component Execution Graph (Case 2)
5.7 Means of Execution Links (Case 2)
5.8 Standard Deviations of Execution Links (Case 2)
5.9 Criticality Indices of Execution Links (Case 2)
5.10 Criticality Indices of Components (Case 2)
6.1 Reusable Components arranged after CAS (Component Attribute System) search
6.2 Components lookup and delivery using CAS
6.3 Components rank update after system feedback or expert review
6.4 Improvement for reusing Components by Rank and CAS
6.5 Improvement in precision for reusing Components by Rank and CAS
6.6 Improvement in Reuse by Rank and CAS
6.7 Improvement in Efforts required after using CAS
7.1 Storage and Searching of COTS (Commercially of the shelf) Components
7.2 CBS (Component Base System) Component Network 1
7.3 Graph of Criticality Indices of Interface Links (Case 1)
7.4 Graph of Criticality Indices of Components (Case 1)
7.5 CBS Component Network 2
7.6 Graph of Criticality Indices of Interface Links (Case 2)
7.7 Graph of Criticality Indices of Components (Case 2)
8.1 REPEAT (Requirement Engineering Process at Telelogic) Requirement Lifecycle Model
8.2 Requirements and Defects Arrival and Service
8.3 No. of Simulation Runs v/s Busy Times of teams
8.4 No. of Simulation Runs v/s Idle Times of teams
8.5 No. of Simulation Runs v/s waiting times of teams
8.6 No. of Simulation Runs v/s maximum queue lengths
8.7 No. of Simulation Runs v/s No. of Requirements
8.8 No. of Simulation Runs v/s No. of Defects
8.9 Idle times of TR and TD for various values of $\lambda$ (Characteristic of the system)
8.10 Waiting times of teams TR and TD for various values of $\lambda$ (Characteristic of the system)
8.11 Maximum queue lengths at teams TR and TD for various values of $\lambda$ (Characteristic of the system)
