DECLARATION . . . . . . . . . . . . vii
ACKNOWLEDGEMENTS . . . . . . . . viii
GENERAL NOTE . . . . . . . . . . . ix
GENERAL INTRODUCTION . . . . . . . x

Section A

GENERAL

Site and geology . . . . . . . . . . . . 1
Fixation of sites for study . . . . . . . 1
Collection of litter samples . . . . . . 3
Plating of the samples . . . . . . . . . 4
Isolation of water molds . . . . . . . . 5
Purification and identification of fungi . . 6
Quantitative study of fungi . . . . . . . 6

Section B

THE FUNGAL FLORA OF LITTER WITH
SPECIAL REFERENCE TO ITS ECOLOGY

INTRODUCTION . . . . . . . . . . . . 8
HISTORICAL RESUME . . . . . . . . 10
Physical and chemical characteristics of litter
Forest type I (Rajababa hill) . . . . . . 14
Distribution of fungi in different horizons of litter .............................................. 15
Physical and chemical characteristics of litter
Forest type II (Sajibhatar hill) .................. 18
Distribution of fungi in different horizons of litter .............................................. 20
Physical and chemical characteristics of litter
Forest type III (Gulla hill) .................. 22
Distribution of fungi in different horizons of litter .............................................. 24
Occurrence of fungi on taxonomic basis ........... 27
Effect of seasonal variations on fungal flora ..... 34
DISCUSSION AND CONCLUSION .............. 39
SUMMARY .............................................. 41

Section C

SUCCESSIONAL STUDY OF FUNGI ON THE DECOMPOSING PLANT PARTS OF THE THREE FOREST TREES

INTRODUCTION .............................................. 43

Experiment I
Isolation of microfungi from the fresh leaves and twigs .............................................. 46
Results .............................................. 47

Experiment II
To study the seasonal variation in the distribution of microfungi associated with leaves and twigs of three forest trees decomposing in the pots .............................................. 49
Results .................................................. 50

Experiment III

To study the change of pH in leaf litter extract of three forest trees .................. 56

Results .................................................. 56

Quantitative development of fungi in the decomposing litters ......................... 58

Discussion, Summary and Conclusion .................................................. 61

Section D

TAXONOMIC STUDIES

Introduction ........................................... 63

Description of Species ................................ 64

Discussion and Summary ................................ 65

List of Fungi Isolated During the Course of Study ..................................... 87

Section E

Cellulose Decomposition by Litter Fungi

Introduction ........................................... 91

Material and Methods

Collection of the litter samples .................................. 94

Isolation of cellulolytic forms of fungi .......................... 94

Results .................................................. 96
Nutritional studies of cellulolytic fungi .... 99
Effect of different media on the growth of
fifteen selected cellulose decomposing fungi . 100
Results ... 101
Effect of various temperatures on the growth of
fifteen selected cellulolytic species ... 103
Results ... 103
Utilisation of sugars by cellulolytic forms ... 110
Results ... 112
Utilisation of cellulose ... 119
Results ... 120
Effect of macro-nutrients on colonisation of
cellulose by litter decomposers ... 123

Experiment I
Effect of nutrients added in solution ... 124
Observation and records ... 125

Experiment II
Effect of nutrients placed in solid form on
lens tissue ... 129
Observations ... 130

STUDY OF CELLULOLYTIC ENZYMES PRODUCED
BY SELECTED LITTER FUNGI

INTRODUCTION ... 131
MATERIAL AND METHODS ... 133
Results ... 136
## DISCUSSION

GENERAL DISCUSSION, SUMMARY AND CONCLUSION ON CELLULOSE DEGRADATION

---

### Section F

**LIGNIN DECOMPOSITION BY LITTER FUNGI**

<table>
