ACKNOWLEDGEMENTS

Expressing acknowledgements keeps me on edge as ambivalent feelings of logic and emotional grip. Ultimately I decided to give way to both, as this period of 4 years has brought a tremendous change, when I look and ponder about.

Starting on logical note, I take this opportunity to express a deep sense of gratitude towards Dr. Harpreet Kaur, Assistant Professor, Department of Zoology, Punjabi University, Patiala, my Ph.D. Supervisor, guiding me through constant encouragement, critical suggestions and logical explanations. Inspite of her busy schedule, she never fell short of time to guide and supervise my work. I am deeply indebted to her as she helped me grow not only as student but also as an individual, however, I envy her cool and calm composure.

I wish to express a soulful gratitude to Dr. Sushma Gupta, an aluminous to Department of Zoology, Panjab University, Chandigarh for lending me help whenever I needed. Without some of her publications, literature and Ph.D. Thesis, it could have been almost impossible to identify the myxozoan parasites.

I am thankful to Prof. (Dr.) M.S. Saini and Prof. (Dr.) Devinder Singh, the former and present Head of Department for providing me necessary lab. facilities.

At international level, I am very thankful to Dr. J.C. Eiras an eminent researcher in the field of Protozoology at the Departamento de Zoologia e Antroplogia, Faculdade de Ciencias, Universidade do Porto, Portugal for sending reprints of research publications through postal service and his valuable suggestions which he shared to me online. I also want to express my gratitude toward A. Fomeana, G. Bouix, N. Sakiiti, E. Blanck, A.S. Abdel-Baki and F.A. Abdel-Ghaffar for providing literature through e-mail.

My special thanks are also due to S. Navtej Singh, Photographer of UCIL (Panjab University, Chandigarh) for providing me facility for photography. I am also thankful to Mr. Gyan Chand of Department of Geology, Panjab University, Chandigarh to ink the parasites meticulously and neatly. My special thanks are also due to S. Gurucharan Singh, Senior
Acknowledgements

Technician, Parasitology Lab, S. Kuldeep Singh, S. Sukhvinder Singh and Mr. Rajmani Misra (Non teaching faculty), Department of Zoology, Punjabi University, Patiala to render necessary help whenever I asked them. I am also very thankful to S. Manjeet Singh (M.G. Cyber Café, Opp. Punjabi University, Patiala), a typing expert, for being helping hand as it could have been very difficult to produce the final version of the thesis.

Let the emotions rule and it touches the chord somewhere when I think of my father Sh. Girdhari Lal Rana without whose blessings and unfailing co-operation this treatise could have remained a fairy imagination only. A formal acknowledgement of my emotions is hardly adequate to express my deep feelings and heartfelt gratitude towards my Taya jee, Tayee jee (who did not gave birth to me but brought me up as their son) and my elder sister Indu Rana who always stood by me during these three years as I was without fellowship. It is their constant encouragement and moral as well as financial support that this Ph. D thesis could see the light of the day. I feel my efforts too trivial to dedicate to them.

I am particularly very thankful to my Lab. fellows Miss Neelam and Miss. Harjinder Kaur to maintain discipline and conducive atmosphere for research, any researcher could be longing for.

Finally my thanks are due to all without whose constant criticism (whether it was positive or negative in sense) and encouragement, this thesis could not have been completed as the place will fall short if each of them is mentioned here.

In the last but not least, I am deeply indebted to myxoozan parasites of the fishes of Punjab wetlands who have certainly no role in human pathogenicity but contributed a lot toward the fulfillment of this Ph.D. Thesis.

Ranjeet Singh
