ACKNOWLEDGEMENTS

This thesis is the end of my Ph.D. journey and at the end of this wonderful journey, time has come to thank all those people who helped me and made this journey an unforgettable experience for me.

First of all I thank you God for all your blessings, life, health, and the positive energy that you have given me to reach my professional goals.

It gives me immense pleasure to express my sincere gratitude to my Supervisor, Prof. Mridula Gupta for being an inspirational supervisor and for making all facilities available to me during the research work. I appreciate her encouragement which gave me the positive energy I needed for my research. She has been a great advisor with her management skills and enthusiasm.

It was definitely a privilege to work with my Co-supervisor, Professor R.S. Gupta for his support and guidance throughout the course of my research. He brought with him a wealth of knowledge and experience. His insightful comments and suggestions have continually helped me to improve my understanding of device physics without which it would not have been possible to complete this doctoral research successfully. I thank him for the insightful discussions and the useful feedback he gave about my research. He will always be an inspiration for me.

My special thanks are due to Dr. Manoj Saxena. I am indebted to him for sacrificing his valuable time to discuss various aspects from time to time. He was a friend, mentor and great supporter for my research. I have learned a lot from his vast technical knowledge and experience. I also thank him from the bottom of my heart for the constant help he provided me in my crucial time of paper and thesis writing and the proof reading of the thesis manuscript. This thesis would have not been possible without his help and contribution.

I also wish to thank Professor P. K. Bhatnagar, Head, Department of Electronic Science, University of Delhi for providing the necessary research facilities. My special
regards to all my teachers including Professor A. Kapoor, Professor E. K. Sharma, and Professor A. K. Verma of Department of Electronic Science because of whose teaching at different stages of education has made it possible for me to reach a stage where I could write this thesis.

I would also like to thank some people from early days of my research. Thanks to Dr. Sona P. Kumar, Dr. Rishu Chaujhar, Dr. Ravneet, Dr. Ritesh Gupta, Dr. Servin Rathi, Dr. Rupendra Kumar Sharma, Dr. Priyanka Malik for their valuable help, knowledge sharing and constant moral support. Special thanks to Dr. Harshupreet Kaur for her constant help, suggestions and moral support. I extend my thanks to Dr. Subashish Haldar and Dr. Jyotika Jogi, for their valuable help and encouragement.

After spending wonderful time with those wonderful people, now I have a chance to express my gratitude to them. I would like to thank all my friends and colleagues at Semiconductor Device Research Laboratory (SDRL) who made my campus life really memorable. Thanks to Pujarini Ghosh, Monika Bhattacharya, Rakhi Narang and Vandana Kumari for providing me a friendly and learning environment. I really enjoyed our discussions during our free time we spent together at Department of Electronic Science, University of Delhi South Campus. I would also like to thank new members of Semiconductor Device Research Laboratory: Ajay Singh, Yogesh Pratap, Sachin Kumar, Jaihind Verma, Sahil and Upasna Kadam.

I am indebted to some of my good friends Neetu Prasad, Neeraj Mani Tripathi, Lalaram Raghav, Parveen and Neha Verma for their love, moral support and constant motivation during my hard times.

My genuine thanks are due to Mr. B. N. Maurya and Mr. Dharmendra Kumar Sharma for their help and technical assistance in the laboratory. Thanks are also extended to the non-teaching staff of the department for their cooperation in the fulfillment of the undertaken work.

I would like to acknowledge University Grants Commission, Govt. of India for the financial support during my Ph.D.
Last but not the least, I want to express my deepest gratitude to my family. This thesis is dedicated to my Grandparents who have inculcated true values in me and inspired me to be a good human being. I can’t express in words my gratitude and love towards my father (Sh. Hari Gopal Gautam), my mother (Smt. Mithlesh Gautam), my brother (Rahul) and my sister (Jaya). I cannot imagine going through all of this alone without the love and support of my family. Their continuous unconditional love, sacrifice, support and encouragement have allowed me to pursue my ambitions.
