to

My Little Angels,

“Jffat & Jsmat”
Impetus

Yellow, black, or gray,
they all are poisonous to our dismay.
Alike to upstairs neighbor phosphorous,
arsenic can freak anywhere of course.
Released from volcanoes, coming from the earth,
it is how these metals came to birth.
Eaten and rubbed to improve complexion,
by women to have a nice reflection.
Used by the royal kings to kill,
their commands it would fulfill.
Herbicides, semiconductors, paints and dyes back then,
used as wood preservative and medicine time and again.
They’re with us and makes us unfit,
This is how we came across these culprits.
Now we have made a resolution,
So that there is no confusion.
To drive the devil out of water,
to avoid any more slaughter.
For this we disguised clay,
to make it their slayer.
The culprit was caught between the layers,
And thus could make no more flares.
Upon the surface it was to realize,
There were organic moieties to hypnotize.
The mission has come to an accomplishment,
As there’s only negligible in solution left.

Ansar Anjum
Acknowledgement

“Sajdah to the omnipresent Lord for HJS rehmat”

The mention of assistance of a huge list of people in making of the thesis deserves out of the regular cite as without them I could not have had this thesis. It is a pleasure for me to convey my unfolded gratitude to them.

Firstly, my utmost gratitude to my supervisor Professor Monika Datta, University of Delhi for her valuable time and fortitude during the course of my work. Not only have I gained from her immense technical experience, but also she has helped hone my knowledge and working skills with constructive criticism, guidance and encouragement. Above all and the most needed, she provided me unflinching encouragement and support in various ways. Additionally, her simplicity of dealing with her students sets a truly wonderful example of a research guide.

I would also like to thank my Joint - supervisor Dr. C. K. Seth, Hindu College, University of Delhi for his critical suggestions and comments and pushing me harder during all times. His diligence and concern could make me attain the goal. His thorough technical knowledge of the subject was sufficient to make a fire out of the spark.

My guides have been the best mentors to me that one can ask for. I acknowledge their apt approach and timely actions to every problem, which in itself is a ladder to achieve perfection. I would thank them for rendering all support, help and guidance, encouragement to learn and explore new things and destinations without which this work would not have attained its present visage.

I express my sincere thanks to Professor S.M.S. Chauhan, Head, Department of Chemistry, University of Delhi for his encouragement at various stages and providing necessary facilities. I am thankful to the members of my advisory committee Professor N. K. Kaushik, Dr. R. Nagarajan and Dr. A. Sakthivel, Department of Chemistry, University of Delhi for their valuable insights they have shared with me in presenting my work better.

I would also like to extend my thanks to the USIC and technical/laboratory staff members of the Department of Chemistry, Mr. G. S. Daspa, Mr. Jitendra Maurya, Mr. Anil and Mr. Ram Prasad for their timely help in providing the necessary instrumentation facilities for my work at any hour of the day.

Sincere and heartfelt thanks from the deepest core of my heart, to my lovely parents, Mrs. & Mr. Ansar Ali, who have always been at my side in all walks of life and have shown their love and concern about my research every time I talked to them. No words of appreciation are sufficient enough to thank them for their blessings and abiding support. This research would have never been completed without their enormous blessings and prayers.

I would also like to say a massive thank you to my mananijaan, Professor Abida Sami and mamujaan, Professor Samiuddin for their love, concern, blessings and unflagging support in all walks of my life.

My brother, Hasan Ali had been a big support in my life and career. I thank him for his blind faith in me at all times. He is the one to whom I could speak out and ask for anything and everything. Despite the distance, he had painstakingly sent
all information I needed every time. At the same time, I would also mention my sister Dr. Lamaan Sami for her love, concern and care during all shades of pink and grey.

A special thanks to my better half Mohd. Junaid needs to be mentioned. He has proved his part in all walks of my life since the day I tied knot with him. I am beholden to him for his tolerance of endless edits, complaints and long days. Thanks to him, for always believing in me and for his continual support every day. He has always been there by my side no matter what may be the deed.

I also acknowledge my father-in-law, Mr. Ahmed Hasan who has always remembered me in his prayers and had always been there to extend his blessings for my success.

Nonetheless, my starlings Ifmat and Ismat have always helped me markedly in pursuing my work in their own kiddies’ way. Their daily instructions to me at the age of two, to travel carefully and safely had always kept me confident at the time when I had a strong phobia of boarding a bus. They have always brought a smile to me in time of sagging. Their chirping had often turned many failures to success. Their rushing to the door with open welcome arms, after hearing the doorbell made all the daylong tiredness wash away in milli seconds. It was their immense love and cooperation that instilled a spark in me to complete the research. They have always stood by me and dealt with all of my absence from many family occasions with a smile.

I would also like to give my warm thanks to my friends and laboratory mates Dr. Sunil K. Arya, Dr. Hema Kundra, Dr. Pratibha Pandey, Dr. Chetna Dhand, Shilpa Jain for their consistent help and concern that could not be expected out of such formal relation. They gave me the moral support to reach my final destination at the time when I was in shambles.

Dr. Reshu Chaudhary, Dr. P.Lokeswari, Rahul Singhal, Manpreet Kaur, Seema, Chandra Mohan, Raj Kumar, Harsha Mangal, Pannii Gajjon, Arun Kant, Priyanka Kumari, Neeraj Kumari and Dr. Uzma Nadeem were the ones who made life easy for me in all forms. They made me learn many chapters of life that I was not acquainted with, hence their participation is ought to be marked.

I would also mention the partaking of Ms. Shruti Srivastava, later joined by Ms. Shweta Dhillon, Ms. Parveen Bhardwaj and Mr. Ratnesh at hot tea strokes. The caffeine had its own contribution in making my research move on. I can never forget the concept of “fractals in nature” by Shruti that lasted from New Delhi to Bangaluru during a conference visit. Fractals shall always hold a chemical relationship between myself and Shruti in future.

I am highly thankful to many other people whom I may have forgotten to mention here, for their breathless cooperation in shaping up my research thoughts and content. Their help, friendship and advice shall always be appreciated. God Bless them all.

Last but not the least the “Blue line” bus service that got erased later from the roads of Delhi, the ‘DTC’ bus and “Metro train” share a major contribution in their own respective tracks.
