CONTENTS

I. Introduction 01
II. Review of Literature 28
III. Materials and Methods 38
IV. Results 71

Callogenesis

- Callus initiation from different explants
- Frequency of callus induction
- Growth of callus
  - Effect of auxins on growth of callus derived from cotyledon and hypocotyl explant of sesame
  - Effect of auxins and cytokinins on growth of callus derived from cotyledon and hypocotyl explant of sesame

Regeneration studies

- Direct regeneration
  - Effect of cytokinin on induction of multiple shoots from deembryonated seed explants
  - Effect of auxins and cytokinins on induction of multiple shoots from deembryonated seed explants.
  - Effect of ABA and AgNO₃ on induction of multiple shoots from deembryonated seed explants.
- Influence of GA₃ on shoot elongation
- Rhizogenesis, hardening and field transfer
Somatic embryogenesis

- Initiation of somatic embryos from different explants
- Effect of auxins on cotyledon and hypocotyl explants
- Effect of auxins and cytokinins on cotyledon and hypocotyl explants
- Histological studies of somatic embryos
- Maturation and germination of somatic embryos
- Hardening and Field transfer

Genetic transformation studies

- Agrobacterium tumefaciens mediated transformation in sesame.
  - Sensitivity of explants to hygromycin on regeneration
  - Optimization of cefotaxime on regeneration
  - Effect of acetosyringone
  - Effect of optical density to Agrobacterium culture
  - Co-infection and co-cultivation period of explants
  - Selection and transformation of transgenic shoots
  - Histochemical GUS activity
  - Analysis of PCR products of shoot
  - Southern blotting analysis of transgenic lines

V. Discussion 88
VI. Summary 104
VII. Conclusion 109
