CHAPTER 1 : INTRODUCTION

1.1 Introduction
1.2 The WWW
1.3 Search Engines
1.4 Search Engine Optimization
1.5 Meta-Search Engines
1.6 Meta-Search Engine Optimization
1.7 Motivation
1.8 Problem Statement
1.9 Objective
1.10 Structure of Thesis
1.11 Summary

CHAPTER 2 : LITERATURE SURVEY AND SCOPE OF RESEARCH

2.1 Introduction
2.2 Literature Survey
2.2.1 History of the web surfing for web search
2.2.2 Initiative of search engine development
2.2.3 Brief about working of search engine
2.2.4 Optimization techniques used by existing search engines
2.2.5 Limitations of existing search engines
2.2.6 Initiative of meta-search engine development
2.2.7 Optimization techniques used by existing meta-search engines
2.2.8 Difference between meta-search engines and search engines
2.2.9 Existing meta-search engines
2.2.10 Difference between existing meta-search engines
2.2.11 Limitations of existing meta-search engines
2.2.12 Need of ranking method in meta-search engine
2.2.13 Ranking methods
2.2.13.1 About ranking
2.2.13.2 Strategies for assigning rankings
2.2.13.3 Ranking methods in search engines
2.2.13.4 Ranking methods in meta-search engines
2.2.13.5 Integrating site into search engines using ranking method
2.2.14 Meta-Search Engine perspective
2.3 Scope of research
2.4 Summary

CHAPTER 3 : STUDY OF RELATED TECHNOLOGY

3.1 Introduction
3.2 Introduction to open source
3.2.1 Open source principles
3.2.2 Need of open source................................................................. 43
3.3 About Ubuntu operating system......................................................... 43
3.3.1 Ubuntu versions........................................................................ 43
3.4 About HTML (Hyper Text Markup Language).................................. 45
3.5 Server-side scripting language: PHP................................................ 48
3.5.1 Need of PHP............................................................................... 48
3.6 MySQL Database............................................................................. 50
3.7 Introduction to client-side scripting language: JavaScript............... 50
3.8 Brief about CSS.............................................................................. 52
3.9 Brief about AJAX............................................................................ 53
3.10 Summary......................................................................................... 57

CHAPTER 4 : NEW MODEL OF THE META-SEARCH ENGINE
4.1 Introduction................................................................................... 59
4.2 The model........................................................................................ 60
4.3 Features of a new model of the meta-search engine.......................... 61
4.4 Need of stop word elimination process.......................................... 62
4.5 Incorporation of databases with new model of the meta-search engine......................................................................................... 70
4.6 Impact of newly introduced ranking algorithm and optimizing techniques......................................................................................... 71
4.7 Summary......................................................................................... 75

CHAPTER 5 : OUTCOME OF THE MODEL AND PERFORMANCE ANALYSIS
5.1 Introduction................................................................................... 76
5.2 Outcome of a new model of meta-search engine module-wise.......... 76
  5.2.1 End-user module...................................................................... 76
    5.2.1.1 Default aggregate search............................................... 76
    5.2.1.2 Selection search............................................................ 77
    5.2.1.3 LIKE search................................................................ 77
    5.2.1.4 Direct search.............................................................. 78
  5.2.2 Administrator module............................................................... 78
    5.2.2.1 Search engine URLs management............................... 78
    5.2.2.2 Stop words management............................................. 79
    5.2.2.3 Database updation....................................................... 79
    5.2.2.4 Database merging....................................................... 79
5.3 Performance Analysis of newly developed model of meta-search engine......................................................................................... 79
  5.3.1 Use of webwait tool............................................................... 79
  5.3.2 Use of pingdom tool............................................................... 85
  5.3.3 PHP code developed to measure response time of web page...... 86
  5.3.4 Use of firebug tool............................................................... 87
5.4 Summary......................................................................................... 89

CHAPTER 6 : TYPES OF SEARCHES
6.1 Introduction................................................................................... 91
6.2 Aggregate search........................................................................... 91
6.3 Selection search............................................................................. 106
