CONTENTS

Preface i

Contents vi

SECTION I

Studies on twilight

1.1 "On the intensity and polarisation of the light from the sky during twilight" A reprint. 67 - 78

1.2 "On the intensity and polarisation of the light from the sky during twilight - Part II" A reprint. 336 - 358

1.3 Tables of the equivalent optical path from the sun to a point P in the observer's zenith for values of zenith angle of the sun greater than 90°. I.1

SECTION II

Vertical distribution of ozone

2.1 The problem of distribution of ozone with height in the earth's atmosphere II.1
2.2 "The calculation of vertical distribution of ozone by the Götz umkehr effect (Method B)" A roneoed pre-print.

2.3 Importance of modified Method B in studying the vertical distribution of ozone in the lower atmosphere.

2.4 Secondary and multiple scattered light corrections to the observed umkehr curve

2.4.1 Effect of the curvature of the atmosphere.

2.4.2 Effect of distributing total ozone content of the atmosphere into three thin layers.

2.4.3 Effect of multiple scattering.

2.5 Conclusion.

2.6 References.

SECTION III

Measurement of surface ozone

3.1 Introduction.

3.2 Presentation of the observed data and discussion.

3.3 Summary.
3.4 Observed surface ozone values at Ahmedabad during June 1954 - May 1955. III.15

3.5 References. III.28

SECTION IV

A review of work on scattering of light by the earth's atmosphere

4.1 Effect of curvature of the earth on the equivalent optical path. IV.1

4.2 Scattering of light by a plane-parallel atmosphere. IV.3

4.21 Work of Rayleigh, King and Tichanowsky. IV.3

4.22 Theory of Chapman and Hammad. IV.6

4.23 Chandrasekhar's theory of radiative equilibrium. IV.13

4.23a Stokes parameters. IV.13

4.23b Rayleigh's law in terms of a phase matrix. IV.15

4.23c Absorption coefficient. IV.16

4.23d Emission coefficient. IV.17

4.23e Source function. IV.18

4.23f Equation of transfer. IV.18
4.23g Modification for the molecular anisotropy.

IV.23

4.23h Solution of the equation of transfer.

IV.23

4.23i The effect of reflection by ground.

IV.27

4.3 References.

IV.29
