List of Figures

1.1 Conversion of $\nu_e$ to $\nu_\mu$ within solar core with variation of matter density. . . 12

3.1 Two solutions of $\tan^2 \theta_{12} = 0.45$ for inverted hierarchical model corresponding to the flavour twister $(\eta/e)$ equals to 0.8405 and 3.16 respectively. 56

3.2 Predictions on $\Delta m_{21}^2$ in the unit $(10^{-5} eV^2)$ and $\Delta m_{23}^2$ in the unit $(10^{-3} eV^2)$ for the value $\tan^2 \theta_{12} = 0.45$ in the range: $0.0040 \leq \eta \leq 0.0053$ and the corresponding correlation graph for inverted hierarchical model. . . . . . . . . 59

3.3 Predictions on $\Delta m_{21}^2$ in the unit $(10^{-5} eV^2)$ and $\Delta m_{23}^2$ in the unit $(10^{-3} eV^2)$ for the value $\tan^2 \theta_{12} = 0.45$ in the valid range: $0.5865 \leq \eta \leq 0.5878$ and the corresponding correlation graph for inverted hierarchical model. . . . . 59

3.4 Predictions on $\Delta m_{21}^2$ in the unit $(10^{-5} eV^2)$ and $\Delta m_{23}^2$ in the unit $(10^{-3} eV^2)$ for the value $\tan^2 \theta_{12} = 0.45$ in the valid range: $-0.0193 \leq \epsilon \leq -0.0147$ and the corresponding correlation graph for inverted hierarchical model. . . . . 60

3.5 Predictions on $\Delta m_{21}^2$ in the unit $(10^{-5} eV^2)$ and $\Delta m_{23}^2$ in the unit $(10^{-3} eV^2)$ for the value $\tan^2 \theta_{12} = 0.45$ in the range: $0.1762 \leq \epsilon \leq 0.2025$ and the corresponding correlation graph for normal hierarchical model. . . . . . . . . 62
