LIST OF FIGURES

Figure 1: Characteristic atmospheric absorption spectrum. ..............................13

Figure 2: The periodic band pattern for the Elsasser model. ...........................25

Figure 3: Absorption as a function of $\beta \chi = S u / d$ for $\beta = 0.1$. .................31

Figure 4: Three typical adjacent intervals showing the position and relative intensities of the lines contained in each.........................................................38

Figure 5: Comparison of the theoretical calculation and experimental measurements.................................................................39

Figure 6: Absorptance for a 0.1 atm-cm path length of $N_2$. ........................61

Figure 7: Absorptance for a 1 atm-cm path length of $N_2$. ............................62

Figure 8: Absorptance for a 10 atm-cm path length of $N_2$. .........................63

Figure 9: Absorptance of a 9335 Å Ti:sapphire laser beam for a 0.01 pr-cm path length of water vapour.................................................................73

Figure 10: Absorptance of a 9335 Å Ti:sapphire laser beam for a 0.1 pr-cm path length of water vapour.................................................................74

Figure 11: Absorptance of a 9335 Å Ti:sapphire laser beam for a 1.0 pr-cm path length of water vapour.................................................................75

Figure 12: Absorptance of a 4 µm free electron laser beam for a 0.01 atm-cm path length of $SO_2$. .................................................................90

Figure 13: Absorptance of a 4 µm free electron laser beam for a 0.1 atm-cm path length of $SO_2$. .................................................................91
Figure 14: Absorptance of a 4 μm free electron laser beam for a 1.0 atm-cm path length of SO₂ ................................................................. 92
Figure 15: Absorptance of a 4 μm free electron laser beam for a .05 atm-cm path length of SO₂ ................................................................. 93
Figure 16: Absorptance of a 4 μm free electron laser beam for a .5 atm-cm path length of SO₂ ................................................................. 94
Figure 17: Absorptance of a 4 μm free electron laser beam for a 5 atm-cm path length of SO₂ ................................................................. 95
Figure 18: Absorptance of a 4 μm free electron laser beam for a 0.01 atm-cm path length of SO₂ ................................................................. 96
Figure 19: Absorptance of a 4 μm free electron laser beam for a 0.1 atm-cm path length of SO₂ ................................................................. 97
Figure 20: Absorptance of a 4 μm free electron laser beam for a 1 atm-cm path length of SO₂ ................................................................. 98
Figure 21: Absorptance of a 4 μm free electron laser beam for a 0.05 atm-cm path length of SO₂ ................................................................. 99
Figure 22: Absorptance of a 4 μm free electron laser beam for a 0.5 atm-cm path length of SO₂ ................................................................. 100
Figure 23: Absorptance of a 4 μm free electron laser beam for a 5 atm-cm path length of SO₂ ................................................................. 101
