**LIST OF FIGURES**

1.1 : Typical glow discharge characteristic.  
      Page no 12

1.2 : Cathode reaction during sputtering process.  
      14

1.3 : Schematics of simplified DC sputtering system.  
      18

1.4 : Effect of magnetic field on electron trapping.  
      22

2.1 : Four point probe technique for measuring sheet resistance.  
      38

2.2 : Van der - Pauw technique for measuring resistivity of arbitrarily  
      shaped films.  
      39

2.3 : Modes of MOS capacitor  
      (a) Accumulation mode, (b) Depletion mode, (c) Inversion mode  
      47

      (d) Variation of capacitance as a function of gate substrate voltage.  
      48

3.1 : Planar magnetron sputtering system.  
      55

3.2 : Detailed cross section of rectangular planar magnetron target using  
      permanent magnets.  
      57

3.3 : I-V characteristics of the zirconium cathode target at different argon  
      pressure.  
      71

3.4 : Variation of deposition rate versus current.  
      72

3.5 : I-V characteristics of glow discharge at different nitrogen pressures.  
      75

3.6 : Cathode potential versus nitrogen partial pressure for different target  
      currents.  
      76

3.7 : Variation of deposition rate as a function of nitrogen partial pressure  
      for a constant current of 200 mA.  
      78

3.8 : X-ray diffraction data for ZrN films at  
      (a) Nitrogen partial pressure of $6 \times 10^{-5}$ mbar  
      (b) Nitrogen partial pressure of $7 \times 10^{-5}$ mbar.  
      79

3.9 : Variation of electrical resistivity of ZrN film as a function of nitrogen  
      partial pressure.  
      80

3.10 : X-ray diffraction patterns for ZrN films  
      (a) as deposited (room temperature).  
      (b) annealed at 350 °C  
      (c) annealed at 550 °C  
      83
3.11: Optical reflectance spectrum for ZrN films
   (a) as deposited (room temperature)
   (b) annealed at 350ºC
   (c) annealed at 550ºC

3.12: Variation of optical constants at a wavelength of 350 nm for ZrN film.

3.13: Scanning electron microscope image of ZrN films on silicon substrate
   (a) as deposited (room temperature)
   (b) annealed at 350 ºC
   (c) annealed at 550 ºC

3.14: Diffusion process in ZrN/Si structure (formation of alloy penetration pits).

4.1: Band bending diagram of metal-semiconductor contact.
   (a) metal-n-type semiconductor
   (b) metal-p-type semiconductor

4.2: Equivalent circuit of real Schottky diode, with series resistance $R_s$ and parallel conductance $G_p$.

4.3: I-V characteristics of ZrN/Si Schottky structure (Sample-1).

4.4: I-V characteristics of ZrN/Si Schottky structure (sample-2).

4.5: Circuit used to calculate depletion capacitance at low frequencies.

4.6: Variation of depletion capacitance versus reverse bias voltage for sample-1.

4.7: Variation of depletion capacitance versus reverse bias voltage for sample-2.

4.8: I-V Characteristics of ZrN/Ge Schottky structure.

4.9: Variation of depletion capacitance versus reverse bias voltage for ZrN/Ge Schottky structure.

4.10: Current-voltage characteristics of ZrN/GaN structure at room temperature.

4.11: SEM Image of ZrN/Ge films as deposited.

4.12: SEM Image of ZrN/GaN films as deposited.

5.1: Trap charges in a MOS structure.

5.2: Capacitance–voltage characteristics of ZrN/TiO$_2$/p-Si MOS structure at 100 KHz.

5.3: Current density (A/cm$^2$) versus electric field (V/cm) for ZrN/ TiO$_2$/p-Si MOS structure.
   (a) Forward bias (accumulation mode).
   (b) Reverse bias (inversion mode).
5.4 : Graph of log I versus $V^{1/2}$ for ZrN/TiO$_2$/p-Si structure. 129
5.5 : Plot of I/D against $V/d^2$ for ZrN/TiO$_2$/p-Si structure. 130
5.6 : Variation of capacitance as a function frequency for ZrN/TiO$_2$/p-Si structure. 131
5.7 : Capacitance–voltage characteristics of Al/TiO$_2$/p-Si MOS structure at 100KHz 133
5.8 : Current (A) versus Voltage (V) of Al/TiO$_2$/p-Si MOS structure 133
5.9 : C-V characteristics of MIM capacitor at 100 KHz. 135
5.10 : I-V characteristics of MIM capacitor. 135
5.11 : Log I versus $V^{1/2}$ for MIM structure. 136
