LIST OF TABLES

Table 3.1 Theoretical fitting parameters of the thermal conductivity data.

Table 3.2 Theoretical fitting parameters in presence and absence of trapped flux lines

Table 4.1 Surface treatments on samples A, B, C and D before each measurement. The number following the letter in the sample codes identifies the measurement number.

Table 4.2 Surface treatments on the polycrystalline sample and named as a, b, c and d.

Table 4.3 DC magnetization measurement results for 1st and 2nd set of samples of large grain niobium.

Table 4.4 results of low temperature baking studies measured at 2K.

Table 6.1 Summary of mechanical samples

Table 6.2 Values mechanical properties measured after various surface treatments in Large grain niobium.

Table 6.3 1050 MHz, $\beta = 0.49$ Single Cell Cavity Parameters

Table 6.4 Average values $R_m$, $\gamma$, $R_{SO}$ and the correlation factor $R^2$ of the large and fine grain cavity.
