ACKNOWLEDGEMENTS

First I would like to thank the God almighty, who gave me the opportunity to be a student (Both Master and Doctorate degree) of Dr D Kandaswamy.

Second, I would like to gratefully and sincerely thank my principal supervisor Dr D Kandaswamy for his guidance, support and encouragement. He was always available to clarify my doubts and without his help, accomplishing this herculean task would have been impossible. More than that, he helped me evolve into an independent thinker.

I take this opportunity to acknowledge my second supervisor Dr V Ganesh, for his advice, thought-provoking questions, support and constructive comments in a friendly way.

I am also extremely thankful to my Research Advisor Dr L Lakshmi Narayanan, who in spite of his busy schedule; had always found time to attend my research progress meeting. His valuable inputs were of great help.

I would also like to thank Dr Bala Kumar for providing me silver nanoparticles for my research project.
I gratefully acknowledge Dr. S P Thyagarajan for motivating and helping me to send my research projects to various funding agencies. His door was always open and I specially thank him for his personal attention.

I thank Dr B Mohan for his brotherly advice that taught me, “Hard work never fails”.

Mrs Gowri and Ms Sophi (Research Scholars) must also be thanked for their help during the execution of all my experiments during my Ph D tenure.

I thank my friends Anand, Raji, Ramkumar, Aby John, Prem Kumar and Eswar for helping me during this period.

Finally and importantly I would like to thank Dr V Lalli (my wife) and Lakhshan Babu (my son) for their understanding and constant support during this Ph D journey. Special thanks to my wife’s prayers, which I believe had helped me to complete this difficult task.
