ACKNOWLEDGEMENTS

It is my pleasure to thank all those who contributed in many ways to the success of this study and made it an unforgettable experience for me.

I am extremely grateful to my principal supervisor, Dr. C.S. Sundar, Director, Materials Science Group (MSG), IGCAR, for his guidance, support and patience without which, this thesis would not have been possible. I really appreciate his willingness to meet me at short notice every time and for critically going through endless drafts of my thesis and research papers. I remain amazed that despite his busy schedule, he was able to give ready attention to my drafts and could give valuable suggestions, that has added substantially to the style of presentation, comprehension as well as technical content, the latter, through extensive discussions.

My sincere gratitude is reserved for my second supervisor Shri. M.P. Janawadkar, Head, Condensed Matter Physics Division (CMPD), MSG, IGCAR. He has always made himself available to clarify my doubts despite his busy schedules and I consider it a great privilege and opportunity to do my doctoral programme under his guidance and to learn from his rich research expertise. His insightful scientific discussions and clarification have greatly improved my understanding of the basics and enriched my comprehension. I always wonder at his patience while correcting the draft of my papers and the thesis in making them free of grammatical and technical errors. I am very grateful to him for all these and for several other aspects of my tenure as a doctoral student.

I am much indebted to Dr. T.S. Radhakrishnan, Formerly Head, Materials Science Division and currently DST supported Scientist, MEG Laboratory, for his valuable advice in my work, spending his precious times to read and correct this thesis, research papers and for his valuable suggestions and for his unconditional support in many ways. His support and friendship has been invaluable both on the academic front and at a personal level, for which I consider myself extremely fortunate. He patiently provided the vision, encouragement and advice necessary for me to proceed through the entire doctorial program and to complete my dissertation.

I owe special thanks to my doctoral committee members, Dr. B.V.R. Tata, Dr. B.P.C. Rao, and Dr. G. Baskaran for their support, guidance and helpful suggestions. Their guidance has served me well and I owe them my heartfelt gratitude.

I would like to express my sincere gratitude to Dr. K. Gireesan for his unconditional support and help. He has been very kind and patient and was always willing to teach me experimental aspects from his rich experience. He also helped me with planning my experiments. I owe him a debt of gratitude. I also thank him for proving liquid helium which is becoming a difficult resource, without interruption for my experiments and all the staff at the liquid helium plant.

My other colleagues in the MEG Laboratory, S. Sengottuvel, C. Parasakthi and Rajesh Patel, have all extended their support in very special ways, and I gained a lot from them, through their personal and scholarly interactions, their suggestions at various points of my research pro-
gramme. I thank all of them, for the stimulating discussions, and for all the fun we have had in the last five years.

I take this opportunity to sincerely acknowledge the Department of Atomic Energy, Government of India, for providing financial assistance in the form of Junior and Senior Research Fellowships which buttressed me to perform my work comfortably.

I thank the former and present Directors, IGCAR, Dr. Baldev Raj and Dr. P.R. Vasudeva Rao and Dr. M. Saibaba, Associate Director, RMG, IGCAR for providing me accommodation, necessary infrastructure and resources to accomplish my research work. I also express my gratitude to all the library staff for their services. I also thank all the staff members of MSG, IGCAR for their help and support. I thank Mrs. Sasikala and Mrs. Uma for their administrative help.

My heartfelt thanks to my many good friends, P. Manimuthu, S.R. Arun, K. Balaji, N. Ganesha moorthy, K.S. Karthikeyan, A. Arokiasamy, T. Uthayakumar, M.S. Manirajain, Charles, C. Kumaran, G. Jai Ganesh, Rajesh Kannan, M. Sivanandam and Mrs. A. Ruby for their valuable help and support. I am indebted to my batch mate friends L. Herojit Singh, M. Bupathi, D. Sri Maha Vishnu, P. Ilaiyaraja, Lakshmoji Kosuru, Jagadeesh Sure, D. Sharath, S. Naveena, Pradeepkumar Samantaroy, K. Siva Srinivas, Sudhansu Pati, Ch. Kishan Singh, Soume Chakrobarty, and Manan Dolakia, for providing a stimulating and fun filled environment. I would like to thank D. Karthikeyan, Saravana kumar, V. Mahendiran, Yazhi Suresh, Bonu Venkatramana and Hari babu who became voluntary subjects for my measurements and also for their fun discussions. I also thank Mrs. Devi and Mr. Suresh for their help in collecting and Xeroxing the course materials and for making my stay at the JRF enclave, comfortable. I thank all the senior and junior research scholars and friends in IGCAR with whom I interacted in several ways and whose names I might have missed out here inadvertently.

I would also like to thank all my Teachers, who throughout my educational career have supported and encouraged me to believe in my abilities. They have directed me in various difficult situations, which have helped to reach this accomplishment.

I owe a lot to my parents, V. Narayanan and N. Thilagam, who encouraged and helped me at every stage of my personal and academic life, and have longed to see this achievement come true. I also would like to thank my extended family members and relatives, S. Dhivya, S. Nivedha, S. Shalini, S. Lusiltha and S. Thamizh mani for their personal support and encouragement.

Above all, I owe it all to Almighty God for granting me the wisdom, health and strength to undertake this research task and enabling me to take it to completion.
