Abstract xi

List of Figures xii

List of Tables xxii

List of Abbreviations xxiv

1 Introduction to MCG and Data Analysis 1
   1.1 Electrophysiology of the Heart .......................... 1
   1.2 Magnetocardiography (MCG) ............................... 3
   1.3 Comparison of MCG with ECG .............................. 4
   1.4 Advantages and clinical applications of MCG ............... 6
   1.5 Challenges in MCG .......................................... 9
       1.5.1 MCG Data Analysis .................................... 9
   1.6 Objectives and organization of the present study ............. 11

2 Development of SQUID based MCG system 19
   2.1 MCG system set up .......................................... 19
   2.2 SQUID as a magnetic field sensor ........................... 20
       2.2.1 Working Principle ..................................... 22
       2.2.2 Flux Locked Loop (FLL) electronics .................. 24
   2.3 Reduction of ambient magnetic noise ........................ 26
       2.3.1 Magnetically Shielded Room (MSR) ..................... 28
       2.3.2 SQUID Gradiometers .................................. 30
   2.4 MCG system modules .......................................... 32
       2.4.1 MCG cryostat and the SQUID insert .................... 32
# Contents

2.4.2 SQUID electrical leads .............................................. 37  
2.4.3 Radio Frequency Shielded Room (RFSR) ............................. 38  
2.4.4 Data Acquisition System ........................................... 39  
2.5 Field gradient-to-Voltage Calibration for SQUID gradiometer .......... 40  
2.6 Field gradient noise level in the SQUID system ...................... 41  
2.7 MCG Measurement .................................................. 43  
2.8 MCG signal source analysis ......................................... 45  

3 Pre-processing of MCG signal using EEMD .................................. 51  
3.1 Brief Overview of Denoising Methods ................................. 51  
3.2 EEMD method for MCG signal pre-processing ....................... 53  
3.2.1 Empirical Mode Decomposition (EMD) ............................ 54  
3.2.2 Ensemble Empirical Mode Decomposition (EEMD) ................ 55  
3.2.3 Mode mixing .................................................. 56  
3.2.4 Noise Amplitude ............................................... 58  
3.3 EEMD Threshold based denoising .................................... 62  
3.3.1 Interval Thresholding ........................................... 63  
3.4 EEMD denoising procedure for MCG data ............................ 64  
3.5 Elimination of low frequency baseline drift .......................... 66  
3.6 Elimination of high frequency baseline drift .......................... 67  
3.7 Denoising by EEMD: Application to simulated data .................. 73  
3.8 Denoising by EEMD: Application to experimental data ............... 76  
3.9 Comparison of EEMD and ICA based denoising ....................... 78  
3.10 Application of EEMD for His bundle detection ....................... 80  
3.11 On the application of combined EEMD and ICA for denoising the multichannel data .......................... 82  
3.11.1 ICA based denoising methods .................................. 83  
3.12 Conclusions ...................................................... 90  

4 Cardiac source estimation from MCG ..................................... 96  
4.1 Equivalent Current Dipole (ECD) model .............................. 96  
4.2 Pseudo Current Density Maps ....................................... 97  
4.3 Inverse problem on MCG data ....................................... 99  
4.4 Methodology for solving inverse problem ............................ 101
4.5 Application to experimental data: Locating a magnetic dipole 104
4.6 Application to experimental MCG data 105
4.7 Effect of noise on source localization: Single dipole analysis 108
4.8 Effect of noise on source localization: Two dipoles analysis 110
4.9 Effect of signal pre-processing on source localization 112
4.10 Effect of signal pre-processing on MFM 113
4.11 Effect of signal pre-processing on PCD maps 115
4.12 Effect of signal pre-processing on inverse solution 117
4.13 Conclusions 119

5 Summary and Future work 123
5.1 Summary 123
5.2 Future Work 126
