<tr>
<td>Chapter 1</td>
<td>1</td>
</tr>
<tr>
<td><strong>INTRODUCTION</strong></td>
<td>1</td>
</tr>
<tr>
<td>1.1 Redox enzymology and its importance:</td>
<td>1</td>
</tr>
<tr>
<td>1.2 Heme-enzymes and their functions - a prologue:</td>
<td>2</td>
</tr>
<tr>
<td>1.2.1 Classification of Heme-enzymes:</td>
<td>2</td>
</tr>
<tr>
<td>1.2.2 Heme-enzymes and redox proteins in cellular biochemistry:</td>
<td>4</td>
</tr>
<tr>
<td>1.2.3 Heme peroxidase family:</td>
<td>7</td>
</tr>
<tr>
<td>Chapter 2</td>
<td>9</td>
</tr>
<tr>
<td><strong>REVIEW OF LITERATURE</strong></td>
<td>9</td>
</tr>
<tr>
<td>2.1 Heme-enzymes and their structure-function aspects:</td>
<td>9</td>
</tr>
<tr>
<td>2.1.1 General mechanistic aspects of heme-enzyme function:</td>
<td>9</td>
</tr>
<tr>
<td>2.1.2 Heme histidylate peroxidases as exemplified by horseradish peroxidase (HRP):</td>
<td>10</td>
</tr>
<tr>
<td>2.1.3 Heme thiolate peroxidases as exemplified by chloroperoxidase (CPO):</td>
<td>13</td>
</tr>
<tr>
<td>2.1.4 Heme tyrosylate enzymes as exemplified by catalase (CAT):</td>
<td>16</td>
</tr>
<tr>
<td>2.2 Diverse reactions catalysed by heme-enzymes:</td>
<td>18</td>
</tr>
<tr>
<td>2.2.1 Peroxidation reactions:</td>
<td>19</td>
</tr>
<tr>
<td>2.2.2 Chlorination reactions and other two-electron transfers:</td>
<td>19</td>
</tr>
<tr>
<td>2.3 Substrate binding and catalysis in heme-enzymes:</td>
<td>21</td>
</tr>
<tr>
<td>2.3.1 Reaction mechanisms and chemistry-salient features of the different viewpoints/schools of thought:</td>
<td>22</td>
</tr>
<tr>
<td>2.3.2 Reaction promiscuity and kinetic paradigms conventionally used in explaining reaction chemistry:</td>
<td>24</td>
</tr>
<tr>
<td>2.3.3 Heme systems and reaction diversity/versatility:</td>
<td>25</td>
</tr>
<tr>
<td>2.3.4 Methodologies conventionally employed in studying heme-enzymes and reactions catalysed by them:</td>
<td>26</td>
</tr>
<tr>
<td>2.4 Heme-enzyme ligands and their characteristics:</td>
<td>29</td>
</tr>

2.5 Modulations of heme-enzyme reactions: .......................................................... 36
   2.5.1 Cues from nature on heme-enzyme reaction modulations: .......................... 36
   2.5.2 Role of radical mediators: ................................................................. 37
2.6 CYP-CPR interactions in CYP450 reactions: ............................................ 37
2.7 Hormesis and free radicals - relevance in toxicology and cellular biology: .... 40
   2.7.1 Hormesis and its importance in toxicology: ........................................... 40
   2.7.2 Free radicals and oxidative damage: .................................................... 41
2.8 Problems in the field: .............................................................................. 42

Chapter 3 ............................................................................................................. 44

AIM AND OBJECTIVES .................................................................................... 44
AIM: ................................................................................................................... 44
SPECIFIC OBJECTIVES: ................................................................................ 44

Chapter 4 ............................................................................................................. 45

MATERIALS AND METHODS .......................................................................... 45
4.1 IN VITRO REGIME: .................................................................................. 45
   4.1.1 Peroxidation reaction kinetics of different enzyme-substrate combinations at
        varied environments: ............................................................................. 45
   4.1.2 Effect of mild radical quenchers on peroxidation reaction enhancements proffered
        by azide: ................................................................................................ 48
   4.1.3 UV-Vis spectral determination of type-II additive ligand binding to heme-
        enzymes: ............................................................................................. 48
   4.1.4 Determination of direct attack of redox additives azide, amitrol and
        phenylhydrazine on native substrates and their one-electron oxidation products: 48
   4.1.5 Assessment of storage-dependent changes to acidity of phenylhydrazine
        solutions: ............................................................................................. 49
   4.1.6 Effects of fresh and stored phenylhydrazine on peroxidation reactions: ........ 49
   4.1.7 UV-Vis spectral studies of fresh and stored phenylhydrazine samples: ........... 49
   4.1.8 1H-NMR studies of fresh and stored phenylhydrazine samples: ................... 49
   4.1.9 HPLC determination of changes to stored phenylhydrazine samples: .......... 50
   4.1.10 Effect of other substrates when used as redox additives in peroxidations
        reactions: ............................................................................................. 50
   4.1.11 Effect of small molecule redox additives on chlorination reactions catalysed by
        CPO: .................................................................................................... 50
   4.1.12 Docking studies of substrate and ligand interactions with heme-enzymes: ...... 51
4.2 IN SITU REGIME: ................................................................. 52
   4.2.1 Prediction of transmembrane segments (TMS) segments of mammalian CYP and CPR: .............................................................. 52
   4.2.2 Probing the functional role of N-terminal transmembrane helix (TMH) interactions of mammalian CYP and CPR: .............................. 52

4.3 PHYSIOLOGICAL REGIME: .............................................. 52
   4.3.1 Effect of redox additives on the growth profile of native and heme/redox enzyme-expressing bacterial strains: ...................................................... 52
   4.3.2 Assay of protein content: ................................................................ 53

Chapter 5 ..................................................................................... 55

RESULTS .......................................................................................... 55

5.1 IN VITRO REGIME: ............................................................... 55
   5.1.1 Peroxidation kinetics of different enzyme substrate combination reactions at varied environments: ............................................................. 55
   5.1.2 Effect of mild radical quenchers on peroxidation reaction enhancements proffered by azide: ................................................................. 66
   5.1.3 UV-Vis spectral determination of type-II additive ligand binding to heme-enzymes: .................................................................................... 67
   5.1.4 Determination of direct attack of redox additives azide, amitrol and phenylhydrazine on native substrates and their one-electron oxidation products: 71
   5.1.5 Effect of stored azide on peroxidation reactions: .................................. 74
   5.1.6 Effect of stored phenylhydrazine: ........................................................ 75
   5.1.7 UV-Vis spectral studies of fresh and stored phenylhydrazine samples: .......... 80
   5.1.8 1H-NMR studies of fresh and stored phenylhydrazine samples: ................. 81
   5.1.9 Determination of changes to stored phenylhydrazine samples: ................. 83
   5.1.10 Effect of other substrates when used as redox additives in peroxidations reactions: ........................................................................... 86
   5.1.11 Effect of small molecule redox additives on chlorination reactions catalysed by CPO: ................................................................. 87
   5.1.12 Docking studies of substrate and ligand interactions with heme-enzymes: ...... 91

5.2 IN SITU REGIME: ................................................................. 96
   5.2.1 Prediction of transmembrane segments (TMS) segments of mammalian CYP and CPR: ................................................................. 96
   5.2.2 Probing the functional role of N-terminal transmembrane helix (TMH) interactions of mammalian CYP and CPR: ............................... 98
5.3 PHYSIOLOGICAL REGIME: ................................................................. 101
  5.3.1 Effect of azide: ................................................................. 101
  5.3.2 Effect of amitrol: .............................................................. 106

Chapter 6 ........................................................................................................ 108

DISCUSSION .................................................................................................... 108

6.1 Peroxidation reaction kinetics - Conceived enzymatic and non-enzymatic
  reactions: .................................................................................................. 108
  6.1.1 Phenomenology of modulations of heme-enzyme reactions by type II binders: 114
  6.1.2 Plausible mechanism for additive mediated effects: ............................. 130
  6.1.3 Chlorination reactions: ............................................................... 136
  6.1.4 Ramifications of the work: .......................................................... 136

6.2 In situ regime: .......................................................................................... 138
  6.2.1 On the functional role of the N-term TMS of CPR in CYP450 reactions: 138

6.3 Physiological regime .................................................................................. 143

Chapter 7 ........................................................................................................ 146

SUMMARY & CONCLUSIONS ....................................................................... 146

APPENDIX ..................................................................................................... 147

  UV-Vis spectral studies with CAT and type-II binders:............................... 147

PUBLICATIONS ............................................................................................ 148
