8. APPENDIX

Table Index

Table 2.1: Differential diagnosis of ulcerative colitis and Crohn’s disease ..................6
Table 3.1: Severity score definitions used in Functional Observational Battery ........34
Table 3.2: Sequential steps for quantitation of colonic lesions using Scion Image software ......................................................................................................................36
Table 4.1: Physicochemical parameters of powdered root bark of O.indicum, roots of A. heterophyllum and fruit pulp powder of A. marmelos ................48
Table 4.2: Phytochemical screening of Oroxyllum indicum fractions ....................50
Table 4.3: Phytochemical screening of Aegle marmelos fruit pulp powder ............50
Table 4.4: Phytochemical screening of A. heterophyllum .....................................51
Table 4.5: Percentage yield of aqueous extract of root bark of O. indicum and its fractions ..................................................................................................................51
Table 4.6: Percentage yield of methanolic extract of dried fruits of A.marmelos and its fractions ..........................................................................................................52
Table 4.7: Functional Observational Battery (FOB) .............................................54
Table 4.8: Effect of 28 days repeated administration of AH_aq on Haematological parameters in rats ............................................................57
Table 4.9: Effect of 28 days repeated administration of AH_aq on Hepatic function in rats .................................................................................................58
Table 4.10: Effect of 28 days repeated administration of AH_aq on Kidney function in rats .................................................................................................58
Table 4.11: Effect of 28 days repeated administration of AH_aq on organ weights in rats .................................................................................................59
Table 4.12: Effect of 90 days repeated administration of AH_aq on Haematological parameters in rats ............................................................63
Table 4.13: Effect of 90 days repeated administration of AH_aq on Hepatic function in rats .................................................................................................64
Table 4.14: Effect of 90 days repeated administration of AH_aq on Kidney function in rats .................................................................................................64
Table 4.15: Effect of 90 days repeated administration of AH_aq on organ weights in rats .................................................................................................65
Table 4.16: Effect of OI_aq and AH_aq on colonic lesion area (damage to colon) of rats ..........................................................................................................72
Table 4.17: Effect of OI_aq and AH_aq on MDA levels in rat colon ......................75
Table 4.18: Effect of OI_aq and AH_aq on MPO levels in rat colon ......................76
Table 4.19: Effect of OI_aq and AH_aq on NO levels in rat colon .........................77
Table 4.20: Effect of OI_aq and AH_aq on GSH levels in rat colon ....................78
Table 4.21: Effect of OI_aq on Magnesium sulphate induced diarrhoea in mice ....80
Appendix

Table 4.22: Effect of OI<sub>aq</sub> on Castor oil induced diarrhoea in mice ............................82
Table 4.23: Effect of OI<sub>aq</sub> on Gastric emptying in rats .............................................83
Table 4.24: Effect of various fractions of aqueous extract of <i>O. indicum</i> against
DNBS induced colitis in rats ..................................................................................84
Table 4.25: Effect of various fractions obtained from aqueous extract of <i>O. indicum</i> against stool consistency in DNBS induced colitis in rats ........85
Table 4.26: Effect of various fractions obtained from methanolic extract of <i>A. marmelos</i> against DNBS induced colitis in rats .............................................85
Table 4.27: Effect of various fractions of methanolic extract of <i>A. marmelos</i>
against stool consistency in DNBS induced colitis in rats
(Preliminary examination with n=3) .................................................................86
Table 4.28: Effect of OI-F and AM-E on survival, incidence of tumours and
number of tumours in colitis associated colon cancer model in rats ..........88
Table 4.29: Effect of OI-F and AM-E on colonic lesion area in colitis associated
colon cancer model in rats ..................................................................................90
Table 4.30: Effect of OI-F and AM-E fractions on NF-kappa B and Interlukin-6
levels in homogenised rat colon ........................................................................91
Figure Index

Figure 2.1: Tree and roots of *O. indicum* .................................................................21
Figure 2.2: Herb and roots of *A. heterophyllum* .......................................................23
Figure 2.3: Tree and unripe fruits of *A. marmelos* .......................................................25
Figure 4.1: Effect of AH$_aq$ on body weight change in 28 days repeated dose oral toxicity in rats .................................................................56
Figure 4.2: Effect of 28 days repeated administration of AH$_aq$ on T.S. of various organs in rats .................................................................60
Figure 4.3: Effect of AH$_aq$ on body weight change in 90 days repeated dose oral toxicity in rats .................................................................62
Figure 4.4: Effect of 90 days repeated administration of AH$_aq$ on T.S. of various organs in rats .................................................................66
Figure 4.5: Effect of OI$_aq$ and AH$_aq$ on percentage body weight change of rats ...68
Figure 4.6: Effect of OI$_aq$ and AH$_aq$ on Food intake (gm/day/rat) .........................69
Figure 4.7: Effect of OI$_aq$ and AH$_aq$ on colon weight of rats ................................70
Figure 4.8: Effect of OI$_aq$ and AH$_aq$ on spleen weight of rats ................................70
Figure 4.9: Effect of OI$_aq$ and AH$_aq$ on Stool consistency of rats ..........................71
Figure 4.10: Effect of OI$_aq$ and AH$_aq$ on colon lesion area (damage to colon) of rats ........................................................................72
Figure 4.11: Histological sections of rat colonic mucosa after four days of
induction of DNBS colitis ..................................................................................73
Figure 4.12: Effect of OI$_aq$ and AH$_aq$ on MDA levels in rat colon .........................75
Figure 4.13: Effect of OI$_aq$ and AH$_aq$ on MPO levels in rat colon .........................76
Figure 4.14: Effect of OI$_aq$ and AH$_aq$ on NO levels in rat colon ............................77
Figure 4.15: Effect of OI$_aq$ and AH$_aq$ on GSH levels in rat colon .........................78
Figure 4.16: Effect of OI$_aq$ on Colonic propulsion in mice .......................................79
Figure 4.17: Effect of OI$_aq$ on Gastrointestinal transit in mice ...............................80
Figure 4.18: Effect of OI$_aq$ on Intestinal fluid accumulation in rats .........................83
Figure 4.19: Macroscopic view of rat colon showing effect of OI-F and AM-E on changes in colon length and tumour formation in colitis associated colon cancer model in rats .........................................................86
Figure 4.20: Effect of OI-F and AM-E on histology of damaged colon in colitis associated colon cancer model in rats .........................................................87
Figure 4.21: Effect of OI-F and AM-E on body weight recorded weekly in colitis associated colon cancer model in rats .........................................................89
Figure 4.22: Effect of OI-F and AM-E on stool consistency score recorded weekly in colitis associated colon cancer model in rats .........................................................89
Figure 4.23: Effect of OI-F and AM-E on colonic lesion area in colitis associated colon cancer model in rats .........................................................90
Figure 4.24: Effect of OI-F and AM-E fractions on NF-kppa B levels in homogenised rat colon .................................................................91
Figure 4.25: Effect of OI-F and AM-E fractions on IL-6 levels in homogenised rat colon .................................................................92
Figure 4.26: Inhibitory effect of OI-F (1–1000 mg/ml) on contractile response induced by exogenous acetylcholine, barium chloride or electrical field stimulation in isolated rabbit ileum ..................................................93
Figure 4.27: Acetylcholine-induced contractions in isolated rabbit ileum: effect of OI-F alone or in presence of verapamil ..................................................93
Figure 4.28: Effect of increasing concentrations of OI-F on responses of Ca\(^{2+}\) in presence of CPA and carbachol ..........................................................94
Figure 4.29: Effect of increasing concentrations of AM-E on responses of Histamine ..........................................................................................94
