CONTENTS

CHAPTER I

1. INTRODUCTION AND SCOPE OF THE PRESENT WORK
1.1 Introduction 1
1.2 Doping effect in polymers 3
1.3 Review of previous work 4
  1.3.1 Transient currents (charging and discharging currents) 4
  1.3.2 DC electrical conduction 6
  1.3.3 Thermally stimulated discharge currents 9
  1.4.4 Pyroelectric currents 12
  1.4.5 Dielectric properties 14
1.5 Significance of the present work 16
References 19

CHAPTER II

2. THEORY

2.1 Structure of polymers 29
2.2 Properties of polymers 30
2.3 The concept of physical states of a polymer 31
2.4 Modification of Polymers 32
2.5 Transient currents (Charging & Discharging currents) 33
2.6 DC Electrical Conduction 38
  2.6.1 Charge carrier injection 40
  2.6.2 Schottky - Richardson emission and Poole - Frenkel emission 41
  2.6.3 Space charge limited current 42
  2.6.4 Tunneling current 44
  2.6.5 Ionic conduction 45
  2.6.6 Impurity conduction 46
  2.6.7 Concept of electrical contacts 46
  2.6.8 Types of electrical contacts 46
2.7 Dielectric properties 48
  2.7.1 Polarization in polymers 48
  2.7.2 Dielectric dispersion phenomena in polymers 48
  2.7.3 Basic theory: a brief outline 51
  2.7.4 Cole-Cole arc 53
  2.7.5 Different types of relaxations in polymers 54
  2.7.6 Factors affecting dielectric behaviour of polymers 55
2.8 Thermally stimulated discharge currents 57
  2.8.1 Effect of Different factors on TSDC spectra 60
  2.8.2 Theoretical background 62
CHAPTER III

3. EXPERIMENTAL TECHNIQUES AND PROCEDURES
   3.1 Methods of polymer film preparation
       3.1.1 Thermal evaporation
       3.1.2 Flash evaporation
       3.1.3 Laser evaporation
       3.1.4 Deposition by polymerization of monomer
       3.1.5 Pyrolysis
       3.1.6 Sputtering
       3.1.7 Gaseous discharge
       3.1.8 Photolytic process
       3.1.9 Casting method
   3.2 Present experimental technique
       3.2.1 Substrate materials and cleaning
       3.2.2 Vacuum coating unit
       3.2.3 Thickness Measurement
       3.2.4 Measurement of transient current
       3.2.5 Measurement of electrical conductivity and I-V characteristics
       3.2.6 Measurement of thermally stimulated discharge currents
       3.2.7 Measurement of pyroelectric current
       3.2.8 Measurement of dielectric properties
   References

CHAPTER IV

4. RESULTS and DISCUSSIONS
   SECTION A
       4.A. Transient currents
   SECTION B
       4.B.1 Electrical conductivity
       4.B.2 Current-Voltage characteristics
   SECTION C
       4.C Thermally stimulated discharge currents
   SECTION D
       4.D Pyroelectricity
   SECTION E
       4.E Dielectric properties
   References

CHAPTER V

5. SUMMARY AND CONCLUSIONS
