ACKNOWLEDGEMENTS

The present studies incorporated in this thesis were undertaken on the suggestion of late Dr. D.S. Srivastava, M.Sc., Ph.D. (Belfast), F.R.M.S., F.R.E.S., F.Z.S. (London), F.Z.S.I., F.N.A.Sc., Professor of Zoology, University of Saugar, under whose supervision most of the practical work was carried out in the Department of Zoology, University of Saugar. The author expresses her gratitude to him for his help, interest and encouragement.

After the death of Dr. D.S. Srivastava, the remaining research work has been carried out and completed under the guidance of Dr. B.K. Srivastava, M.Sc. (D.Phil. (Alld.), Assistant Professor of Zoology, University of Saugar, Sagar whom the author is extremely grateful for his keen interest and constant encouragement during the work, helpful criticism and painstaking correction of the manuscript.

The author takes great pleasure in acknowledging her indebtedness to Dr. H.N. Bhargava, M.Sc., Ph.D. (Saugar), Ph.D. (London), Head of the Zoology Department, University of Saugar, for providing necessary facilities.

I also express my deep gratitude to Dr. D.D. Soni, M.Sc., Ph.D. (Saugar) Assistant Professor of Zoology, Saugar University, for his continued help during the progress of the present work.
