ACKNOWLEDGEMENTS

For the last 5 years, I have dreamt and lived this research work. The outcome of the work done during this time is presented here. That I have completed it is a feat in its own right, and I feel indebted to uncountable people who have helped me achieve this. Though it may not be possible to name all of them, I would like to convey my deepest sense of gratitude to them at the very start.

I would like to express my sincere gratitude to my supervisor, Dr. Yashwant Singh Thakur, for his guidance, encouragement and support all through. It is he who made a very complicated task look very simple.

I also wish to thank all my teachers, who have taught me to be honest and sincere in all my efforts, and whose good wishes have helped me to achieve the modest goals that I have set for myself. This is one of those goals, and I feel especially indebted to Dr. S. Neelamegham, Director, NIILM-CMS, New Delhi and Dr. Upinder Dhar, Director, PIMR, Indore for their guidance and encouragement.

Special thanks are due to my husband, Kishore, for never allowing me to give up, and for giving the pep talks every researcher needs during the roller coaster ride that a Doctoral Research takes one through. I reserve a special word of thanks, and heartfelt gratitude for my mother, Smt. Usha and my brother, Tanuj and his wife, Shefali, for constantly reminding me to keep my work going, and for keeping me on track. Without their background support, this dream could not have come true. I wish to put on record my gratefulness to my son, Ishir, for his patience and encouragement. Without truly understanding what his mother was doing, he never failed to ask me
every single day how much time was left for me to become a doctor like our President, Dr. A.P.J. Abdul Kalam.

Heartfelt gratitude is due to all the bank and NGO officials—Mr. Gupta, Mr. Goel, Ms. Diwan, and all the women borrowers who helped me in collecting data for this research. I wish to thank all other people who I met during the course of my research, and who contributed in some way to its shape.

I would also like to thank my friends, Ms. Seema Sahai and Dr. Niraj R. B. L., for all the support and help they lent me during the course of this work. Thanks are due to Ms. Soji Thomas, Mr. Dushyant Namdeo and Mr. Sabir Qureshi for the immense help they extended to me.

I am also reminded of the small incidents when I felt lost and confused about my work, and how almost as a miracle, I would be brought out of the darkness, into broad daylight, and the work just went on. For all this, I thank Lord Almighty, and may I continue to receive such small mercies always!
