List of tables

**Table 1.1.** Depicts a recent literature review about the drug combination studies carried out to improve the 5-FU resistance in gastrointestinal cancers including the cancers of colon and hepatic cancers (HCC) (30, 34-42).

**Table 1.2.** Depicts the preclinical studies reported with CRC (97).

**Table 3.1.** Depicts the zeta potential, entrapment and loading efficiency values of 5-FU-N, O-CMC NPs and CRC-N, O-CMC NPs.

**Table 3.2.** Depicts the zeta potential, entrapment and loading efficiency values 5-FU-TCS NPs and CRC-TCS NPs.

**Table 3.3.** Depicts the combination index (CI) values of samples (CRC/5-FU, CRC-N, O-CMC NPs/5-FU-N, O-CMC NPs, and CRC-TCS NPs/5-FU-TCS NPs) treated with HT 29 cells after 48 hours.

**Table 3.4.** Depicts the pharmacokinetic parameters derived for the bare 5-FU and CRC solution after the intravenous administration in Swiss Albino mice (after 72 hours).

**Table 3.5.** Depicts the pharmacokinetic parameters derived for the 5-FU-N, O-CMC NPs and 5-FU-N, O-CMC NPs from the co-administered system after intravenous administration in Swiss Albino mice (after 72 hours).

**Table 3.6.** Depicts the pharmacokinetic parameters derived for the CRC-N, O-CMC NPs and CRC-N, O-CMC NPs from the co-administered system after the intravenous administration in Swiss Albino mice (after 72 hours).

**Table 3.7.** Depicts the pharmacokinetic parameters derived for the 5-FU-TCS NPs and 5-FU-TCS NPs from the co-administered system after the intravenous administration in Swiss Albino mice (after 72 hours).

**Table 3.8.** Depicts the pharmacokinetic parameters derived for the CRC-TCS NPs and CRC-TCS NPs from the co-administered system after the intravenous administration in Swiss Albino mice (after 72 hours).

**Table 3.9.** Depicts the histopathological observation of mice organs after treating with saline, 5-FU-N,O-CMC NPs, CRC-N,O-CMC NPs, the combination of 5-FU-N,O-CMC NPs/CRC-N,O-CMC NPs along with the combination of bare drugs (as sample control) after 72 hours.
Table 3.10. Depicts the histopathological observation of mice organs after treating with saline, 5-FU-TCS NPs, CRC-TCS NPs, and the combination of 5-FU-TCS NPs/CRC-TCS NPs after 72 hours
