List of Figures

Fig. 2.1  CBR moisture content relationships for natural and lime treated ML soil (Thompson, 1970) ..............................................................

Fig. 2.2  Ettringite formation in lime stabilised cohesive soils (Buttress, 2013) .........................................................................................

Fig. 2.3  Fibrous crystals of ettringite ........................................................................

Fig. 2.4(a) Ettringite formation in kaolinite-lime system (after 6 months curing) (Rajasekaran, 2005) ..........................................................

Fig. 2.4(b) Ettringite formation in quicklime–sodium sulphate treated marine clay (after 45 days treatment) (Rajasekaran, 2005) ...............

Fig. 3.1  Location of sampling points (Rajasekaran et al. 1999) .......................... 47

Fig. 3.2  X-ray diffraction pattern of clay 1 (Panampilly Nagar Clay) .......................... 50

Fig. 3.3  X-ray diffraction pattern of clay 2 (Kaloor Clay) ........................................ 51

Fig. 3.4 (a) & (b) Micrographs of clay 1 .................................................................. 53

Fig. 3.5  Grain size distribution curves of clay 1 and clay 2 ................................. 58

Fig. 3.6  Sealed UCC samples kept for curing .................................................... 62

Fig. 4.1  Variation of liquid limit with sulphate content for clay 1 treated with 3% lime ................................................................. 76

Fig. 4.2  Variation of liquid limit with sulphate content for clay 1 with treated 3% lime and BaCl₂ ......................................................... 76

Fig. 4.3  Variation of liquid limit with sulphate content for clay 1 treated with 6% lime ................................................................. 80

Fig. 4.4  Variation of liquid limit with sulphate content for clay 1 treated with 6% lime and BaCl₂ ......................................................... 80

Fig. 4.5  Liquid limit vs. plasticity index for 3% lime treated clay 1 with varying sulphate contents ..................................................... 82

Fig. 4.6  Liquid limit vs. plasticity index for 3% lime treated clay 1 with varying sulphate contents and barium chloride ...................... 82

Fig. 4.7  Liquid limit vs. plasticity index for 6% lime treated clay 1 with varying sulphate contents ..................................................... 83
Fig. 4.8  Liquid limit vs. plasticity index for 6% lime treated clay 1 with varying sulphate contents and barium chloride......................... 83
Fig. 4.9  Grain size distribution curves for 3% lime treated clay 1 with varying sulphate contents.......................................................... 85
Fig. 4.10  Grain size distribution curves for 3% lime treated clay 1 with varying sulphate contents and barium chloride..................... 85
Fig. 4.11  Grain size distribution curves for 6% lime treated clay 1 with varying sulphate contents...................................................... 86
Fig. 4.12  Grain size distribution curves for 6% lime treated clay 1 with varying sulphate contents and barium chloride..................... 86
Fig. 4.13  Grain size distribution curves for 6% lime treated clay 2 .......... 87
Fig. 4.14  Grain size distribution curves for 6% lime treated clay 2 with 4% sulphate with 4% sulphate and barium chloride............. 87
Fig. 4.15  Grain size distribution curves for 6% lime treated clay 2 with 4% sulphate and barium chloride.......................................... 88
Fig. 4.16  Grain size distribution curves for 6% lime treated clay 2 with 4% sulphate and barium hydroxide....................................... 88
Fig. 4.17  Variation of liquid limit with curing period for clay 2............. 93
Fig. 4.18  Variation of plasticity index with curing period for clay 2 ...... 93
Fig. 4.19  Variation of shrinkage limit with curing period for clay 2 ........ 94
Fig. 4.20  Variation of free swell index with curing period for clay 2 ...... 94
Fig. 4.21  Liquid limit vs. plasticity index for 6% lime treated clay 2 with 4% sulphate................................................................. 95
Fig. 4.22  Liquid limit vs. plasticity index for 6% lime treated clay 2 with 4% sulphate and barium chloride ....................................... 95
Fig. 4.23  Liquid limit vs. plasticity index for 6% lime treated clay 2 with 4% sulphate and barium hydroxide....................................... 96
Fig. 4.24  Liquid limit vs. plasticity index for 6% lime treated clay 2 with 4% sulphate and barium additives ...................................... 96
Fig. 5.1  e - log p curves for 6% lime treated clay 1 (containing 0.5% natural sulphate)................................................................. 102
Fig. 5.2  e - log p curves for 6% lime treated clay 1 with barium chloride......................................................................................... 102
Fig. 5.2(a) Effect of barium chloride on 6% lime treated clay 1 (Immediate) ................................................................................................. 103
Fig. 5.2(b) Effect of barium chloride on 6% lime treated clay 1 cured for one week ................................................................................ 103
Fig. 5.2(c) Effect of barium chloride on 6% lime treated clay 1 cured for one month ................................................................. 104
Fig. 5.2(d) Effect of barium chloride on 6% lime treated clay 1 cured for three months .......................................................... 104
Fig. 5.2(e) Effect of barium chloride on 6% lime treated clay 1 cured for six months ............................................................. 105
Fig. 5.2(f) Effect of barium chloride on 6% lime treated clay 1 cured for 12 months ................................................................. 105
Fig. 5.2(g) Effect of barium chloride on 6% lime treated clay 1 cured for 24 months ................................................................. 106
Fig. 5.3(a) Effect of barium chloride on 6% lime treated clay 1 with 1% sulphate and cured for 3 months ........................................ 106
Fig. 5.3(b) Effect of barium chloride on 6% lime treated clay 1 with 1% sulphate and cured for 6 months ...................................... 107
Fig. 5.3(c) Effect of barium chloride on 6% lime treated clay 1 with 1% sulphate and cured for 24 months ................................... 107
Fig. 5.4(a) e - log p curves for 6% lime treated clay 1 with 2% sulphate ................................................................. 109
Fig. 5.4(b) Effect of barium chloride on 6% lime treated clay 1 with 2% sulphate and cured for 12 months ................................ 109
Fig. 5.4(c) Dial gauge reading vs. log time (t) curves ................................................................................................. 110
Fig. 5.5 Effect of varying sulphate content on 6% lime treated clay 1 .................................. 111
Fig. 5.6 e - log p curves for 3% lime treated clay 1 containing 0.5% natural sulphate .................................................................. 112
Fig. 5.7 Effect of lime content on clay 2 ................................................................. 113
Fig. 5.8 Effect of curing period on 6% lime treated clay 2 ......................... 115
Fig. 5.9 e - log p curves for 6% lime treated clay 2 with 4% sulphate ....... 115
Fig. 5.10 e - log p curves for 6% lime treated clay 2 with 4% sulphate and barium chloride .......................................................... 116
Fig. 5.11  $e - \log p$ curves for 6% lime treated clay 2 with 4% sulphate and barium hydroxide ................................................................. 116

Fig.5.12(a) Comparison of effect of barium chloride and barium hydroxide (curing period 3 months)......................................................... 117

Fig.5.12(b) Comparison of effect of barium chloride and barium hydroxide (curing period 9 months)......................................................... 117

Fig.5.13(a) Variation of $de/d\log(p)$ with curing period for treated clay 1
(p = 6.25 – 12.5 k Pa)........................................................................ 126

Fig.5.13(b) Variation of $de/d\log(p)$ with curing period for treated clay 1
(p = 12.5 – 25 k Pa)............................................................................. 126

Fig.5.13(c) Variation of $de/d\log(p)$ with curing period for treated clay 1
(p = 200 - 400 k Pa) ........................................................................ 127

Fig.5.14(a) Variation of $de/d\log(p)$ with curing period for treated clay 2
(p = 6.25 – 12.5 k Pa)........................................................................ 127

Fig.5.14(b) Variation of $de/d\log(p)$ with curing period for treated clay 2
(p = 12.5 – 25 k Pa)............................................................................. 128

Fig.5.14(c) Variation of $de/d\log(p)$ with curing period for treated clay 2
(p = 200 - 400 k Pa) ........................................................................ 128

Fig.5.15(a) Effect of barium chloride on 6% lime treated clay 1 with
0.5% sulphate ................................................................................ 132

Fig.5.15(b) Effect of barium chloride on 6% lime treated clay 1 with
2% sulphate .................................................................................... 133

Fig. 5.16 Typical log e-log p plot for determination of $p_c$...................... 134

Fig. 5.17 Effect of barium chloride in 6% lime treated clay 1 .............. 135

Fig. 5.18 Effect of barium chloride in 6% lime treated clay 1 with
1% sulphate ................................................................................. 135

Fig. 5.19 Effect of barium chloride in 6% lime treated clay 1 with
2% sulphate .................................................................................... 136

Fig. 5.20 Variation of bond strength with curing period for 6% lime treated clay 2 ................................................................. 137

Fig. 5.21 Effect of barium chloride in 6% lime treated clay 2 .............. 138

Fig. 5.22 Effect of barium hydroxide in 6% lime treated clay 2 ......... 138
Fig. 5.23  Comparison of effect of barium hydroxide and barium chloride.................................................................................................................................................. 139
Fig. 6.1  Variation of unconfined compressive strength with curing period for clay 1 ........................................................................................................................................................................... 147
Fig. 6.2  Effect of barium chloride in mitigating the effect of sulphates in lime stabilised clay 1 (0.5% sulphate) .................................................. 148
Fig 6.3  Effect of barium chloride in mitigating the effect of sulphates in lime stabilised clay 1 (2 % sulphate) ........................................ 148
Fig 6.4  Effect of barium chloride in mitigating the effect of sulphates in lime stabilised clay 1 (4 % sulphate) ........................................... 149
Fig 6.5  Effect of barium chloride in mitigating the effect of sulphates in lime stabilised clay1 (with varying sulphate contents) ................................................................. 149
Fig. 6.6  Effect of sulphate in lime treated clay 2 (4% sulphate) .............. 153
Fig. 6.7  Effect of barium chloride in lime treated clay 2 (4% sulphate) ........................................................................................................... 153
Fig. 6.8  Effect of barium hydroxide in lime treated clay 2 (4% sulphate) ........................................................................................................ 154
Fig. 6.9  Effect of barium compounds in lime treated clay 2 (4% sulphate) ........................................................................................................ 155
Fig. 6.10  Effect of various additives on clay 2................................. 157
Fig. 6.11  Stress – strain plots for lime treated clay 2 ........................................... 157
Fig. 6.12  Stress – strain plots for lime treated clay 2 (4% sulphate) .......... 158
Fig. 6.13  Stress – strain plots for lime treated clay 2 (4% sulphate & barium chloride) .................................................................................. 158
Fig. 6.14  Stress – strain plots for lime treated clay 2 (4% sulphate & barium hydroxide) .................................................................................. 159
Fig. 6.15  Failure strain vs. curing period .................................................. 159
Fig. 6.16  X - ray diffraction pattern of lime treated clay 1 cured for 12 months (4 % sulphate). ................................................................. 160
Fig. 6.17  X - ray diffraction pattern of lime treated clay 1 cured for 12 months (4 % sulphate and barium chloride) ................................. 160
Fig. 6.18  X-ray diffraction pattern of lime treated clay 1 cured for 12 months (4% sulphate) ................................................................. 162
Fig. 6.19  X-ray diffraction pattern of lime treated clay 1 cured for 12 months (4% sulphate and barium chloride) ........................ 162
Fig. 6.20  SEM images of ettringite in lime treated clay 1 cured for 12 months (4% sulphate) ................................................................. 163
Fig. 6.21  SEM images lime treated clay 1 cured for 12 months (4% sulphate barium chloride) ............................................................. 163
Fig. 6.22  EDAX results for 6% lime treated clay 1 after one month curing .......................................................................................... 165
Fig. 6.23  EDAX results for 6% lime treated clay 1 after six months curing .......................................................................................... 165
Fig. 6.24  SEM images of 6% lime treated clay 1 after one month curing .......................................................................................... 166
Fig. 6.25  SEM images in 6% lime treated clay 1 after six months curing .......................................................................................... 166
