List of Tables

Chapter 1

Table-1  Genes influenced by ω-3 PUFAs........................................................................................................... 18
Table-2  Summary of clinical trials of fish oils in chronic inflammatory diseases............................................. 27
Table-3  Consumption of vegetable oils between the year 2000 – 2006........................................................... 29
Table-4  Trivial names of Garden cress (Lepidiumsativum L.)........................................................................... 34

Chapter 2: Section A

Table-1  Notation of common fatty acids......................................................................................................... 43
Table-2  Tocopherol content in different vegetable oils (mg/100g)................................................................. 46
Table-3  Physicochemical properties of GCO extracted by cold press, soxhlet and supercritical CO$_2$ extraction......................................................................................................................... 60
Table-4  Colour measurement of GCO extracted by different methods........................................................... 61
Table-5  Fatty acid composition of GCO extracted using different methods....................................................... 63
Table-6  Positional distribution of fatty acids in the TAG of GCO....................................................................... 65
Table-7  Tocopherol content in GCO extracted using different methods........................................................... 66
Table-8  Carotenoid content in GCO extracted by cold pressing and soxhlet extraction methods.................... 67

Chapter 2: Section B

Table-9  Composition of experimental diets.................................................................................................... 86
Table-10 Fatty acid composition of lipids in experimental diets......................................................................... 87
Table-11 weights of rats fed with experimental diets......................................................................................... 88
Table-12 Lipid profile of serum and liver of rats fed with experimental diets and respective TBRS values.......................................................... 89
Table-13 Fatty acid composition of serum and liver lipids of rats fed with experimental diets................................. 92
Table-14 Fatty acid composition of brain and adipose tissue lipids of rats fed with experimental diets................... 95
Table-15 Fatty acid composition of heart and kidney tissue lipids of rats fed with experimental diets................... 98

Chapter 3: Section A

Table-1  Composition of experimental diets.................................................................................................... 121
Table-2  Fatty acid composition of lipids in experimental diets......................................................................... 122
Table-3  Fatty acid composition of spleen lymphocyte and peritoneal macrophage lipids isolated from rats fed with GCO........................................................................................................... 123
### Chapter 3: Section B
