LIST OF TABLES

Table 3-1:  Outline of Treatment Protocol Group REBT for Depression and Irrational Beliefs……………………………………………………………………………… 97

Table 3-2:  Behaviours Targeted in Social Skills Training………………………… 108

Table 4-1-1: Mean age and SD of the fertile and infertile women (objective-1) ……... ………………………………………………………………………………… 124

Table 4-1-2: Showing the educational background of fertile and infertile women (Objective-1)…………………………………………………………………………… 124

Table 4-1-3: Distribution of the sample by Annual income and group (objective-1). ………………………………………………………………………………… 125

Table 4-1-4: Distribution of the sample by type of marriage among fertile and infertile women (objective-1)………………………………………………………………………………………………… 125

Table 4-1-5: Mean duration of years of marriage of the fertile and infertile women (objective-1)…………………………………………………………………………… 126

Table 4-1-6: Distribution of the sample by family history of infertility among fertile and infertile women (objective-1)………………………………………………………………………………………………… 126

Table 4-1-7: Distribution of the sample by sexual satisfaction and groups (objective-1)…………………………………………………………………………… 127

Table 4-2-1: Mean and SD scores of fertile and infertile women for BDI-II (objective-1). ……………………………………………………………………………… 127

Table 4-2-2: Mean, SD and results of Independent sample ’t’-test for SGABS among Fertile and Infertile women (objective-1)………………………………………………………………………………………………… 128

Table 4-3-1: Mean age of the Experimental and Control groups (Main study)………………………………………………………………………………………………… 129

Table 4-3-2: Distribution of the sample by groups and Educational background (Main study)………………………………………………………………………………………………… 130

Table 4-3-3: Distribution of the sample by Annual income and groups (Main study)………………………………………………………………………………………………… 130

Table 4-3-4: Distribution of the sample by type of marriage and groups (Main study)………………………………………………………………………………………………… 131

Table 4-3-5: Distribution of the sample by food habit and groups (Main study)………………………………………………………………………………………………… 131
Table 4-3-6: Distribution of the sample by cigarette smoking and groups (Main study) ................................................................. 132

Table 4-3-7: Distribution of the sample by sexual satisfaction and groups (Main study) ................................................................. 132

Table 4-3-8: Mean and SD for years of marriage between Experimental and Control groups (Main study) ......................................................... 133

Table 4-3-9: Mean and SD for number of years of attempts made by couples to conceive between experimental and control groups of infertile women (Main study) ................................................................. 133

Table 4-3-10: Mean and SD for number of years of infertility treatment between experimental and control groups of infertile women (Main study) ................................................................. 134

Table 4-3-11: Distribution of the Cause for Infertility and groups among infertile women (Main study) ................................................................. 134

Table 4-4-1: Mean and SD scores of experimental and control groups for BDI-II (objective-II) ................................................................. 135

Table 4-4-2: Mean, SD and results of Independent samples’ t’-test for SGABS between experimental and control groups on irrational beliefs (objective-2) ................................................................. 135

Table 4-5-1: Mean score on pre treatment, post treatment and follow up sessions for Experimental and control groups for Depression (Main study) ................................................................. 136

Table 4-5-2: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control group for Depression (Main study) ................................................................. 137

Table 4-5-3: Mean score on pre treatment, post treatment and follow up REBT sessions for Experimental and control groups on Affective Factor subscale of Depression (Main study) ................................................................. 138

Table 4-5-4: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups on Affective Factor subscale of Depression (Main study) ................................................................. 138

Table 4-5-5: Mean score on pre treatment, post treatment and follow up REBT sessions for Experimental and control groups for Somatic Factor subscale of Depression (Main study) ................................................................. 139

Table 4-5-6: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for
experimental and control groups for Somatic Factor subscale of Depression (Main study)…………………………………. 139

Table 4-5-7: Showing the Cohen’s $d$ (effect size) on Depression and Affective, Somatic factors sub scales of Depression………………………… 142

Table 4-6-1: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups for Irrational Beliefs (Main study)……………………………………………… 143

Table 4-5-2: Result of repeated measure ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups for Irrational Beliefs (Main study)……………………………………………………………… 143

Table 4-5-3: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and control groups on Rationality Factor subscale of irrational beliefs (Main study)…………………………………… 144

Table 4-6-4: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups on Rationality Factor subscale of irrational beliefs (Main study)…………………………………… 145

Table 4-6-5: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups for Self – Downing Factor subscale of Irrational beliefs(Main study)……………… 146

Table 4-6-6: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups on Self - Downing Factor subscale of irrational beliefs (Main study)…………………………………… 146

Table 4-6-7: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups for need for Approval Factor subscale of Irrational beliefs(Main study)……… 147

Table 4-6-8: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups on need for Approval Factor subscale of irrational beliefs (Main study)…………………………………… 147

Table 4-6-9: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups on need for Achievement Factor subscale of Irrational beliefs(Main study)…………………………………… 148

Table 4-6-10: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for
experimental and control groups on need for Achievement Factor subscale of irrational beliefs (Main study)…………………………………… 149

Table 4-6-11: Mean score on pre treatment, post treatment and follow up sessions REBT for Experimental and Control groups on need for Comfort Factor subscale of Irrational beliefs(Main study)………………… 150

Table 4-6-12: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up for experimental and control groups for need for Comfort Factor subscale of irrational beliefs (Main study)……………………………….. 150

Table 4-6-13: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups on need for Fairness Factor subscale of Irrational beliefs (Main study)…….. 151

Table 4-6-14: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up for experimental and control groups on need for Fairness Factor subscale of irrational beliefs (Main study) …………………………. 151

Table 4-6-15: Mean score on pre treatment, post treatment and follow up sessions of REBT for Experimental and Control groups on Other-Downing Factor subscale of Irrational beliefs (Main study)…………………………………………………………………. 152

Table 4-6-16: Result of repeated measures ANOVA for mean score on pre treatment, post treatment and follow up REBT sessions for experimental and control groups on Other-Downing Factor subscale of Irrational beliefs(Main study)…………………………………….. 153

Table 4-6-17: Showing the Cohen’s d (effect size) on different areas of Irrational Beliefs and its subscales……………………………………………… 155
