ACKNOWLEDGEMENT

It is with a sense of great reverence that I feel indebted to Dr. M. R. Islam, presently Professor and Head, Department of Chemistry, Assam Central University, Silchar for his patronage during my M.Phil studies. It was in fact Dr. M. R. Islam who was to guide me in my Ph.D. programme but due to his appointment as Professor in Silchar, the present work was then supervised by Dr. Khaliq-uz-Zaman Khan.

However, I also feel indebted to my supervisor Dr. Khaliq-uz-Zaman Khan who equally contributed in carrying out this work with affectionate and benovent attitude. He spared his precious time and energy for this work, despite his busy schedule. Without his keen interest, intellectual stimulation and critical comments, it would have been very difficult to complete this work. His jubilant and regent personality always kept my spirits alive.

It is an established fact that Dr. G. M. Rather, a devoted academician and great genius agreed upon to act as my Co-supervisor for the present work. His acute perception, valuable suggestions and sound judgments about the problems of the topic and then his consistent guidance and the lovable attitude lastly culminated in the completion of this uphil task.

Head, Department of Chemistry, Dr. M.A. Quirishi deserves my sense of great appreciation who always encouraged and helped me in solving the different technical problems. I wish that the Department may excel under his resolute and dynamic governance.

My brother, Mr. Nazir Ahmad Sheikh stood through thick and thin and his personal sacrifices for my research programme are sincerely acknowledged.

Feeling like kindered spirits while working in the Laboratory with my fellow scholar, Miss. Majida, a born genius - I faced all odds and evens during my research with patience. Her association during the present work is sincerely acknowledged.

A great body of my friends in the G. K. R. S. Hostel and my fellow scholars in the Department are gratefully acknowledged for their love and affection.

Above all it was the great desire and great wishes of my parents who acted as the prime source of my inspiration for a great success in my academics which ultimately resulted the completion of this research work.

Lastly, thanks are due to Mr. Javeed Ahmad Bhat of Universal Computers for taking pains in typing the manuscript with extra care.

Fayaz Ahmad Sheikh
