This dissertation is an embodiment of selfless encouragement and support I got from all my friends and colleagues throughout my PhD work.

I would like to express my sincere gratitude to Prof. Alok Dhawan for supervising my PhD dissertation. I am very grateful to him for his generous support, scientific freedom, critical and constructive discussions, providing motivating and stimulating atmosphere. Professor Dhawan’s vision and personality make him a great advisor. I thank him for his fairness and his understanding about scientific or non-scientific questions. His wide knowledge and his logical way of thinking have been of great value for me. His understanding, encouraging and personal guidance have provided a good basis for the present thesis. With him, as a student, I have learned a lot about science and developing research methodologies and technical writing skills. All these values have really helped me for future academic advancements. He has always been a source of inspiration for me and I am really thankful to him for his advice and suggestions. Words won’t be sufficient to express my indebtedness to him.

I sincerely thank Dr. K. C. Gupta, Director, CSIR-Indian Institute of Toxicology Research for his support, encouragement, guidance and care while working in this esteemed organization.

I take this privilege to express my deepest regards and gratitude to my co-supervisor Prof. Swatantra K. Jain, Head, Department of Biotechnology, Jamia Hamdard, New Delhi for his considerable help, inspiring guidance, patience, crucial contribution and constant encouragement throughout the study. He provided me persistent encouragement and support in several ways. His detailed and constructive comments throughout this study made this dissertation possible one.

I take privilege to express my thankfulness and regards to Prof. Diana Anderson, Established Chair, Biomedical Sciences, School of Life Sciences, University of Bradford, Bradford, UK for permitting me to work there for three months and learn TARDIS assay, a novel technique for identifying TopoisomeraseII-DNA adducts. Her keen interest, support and necessary facilities throughout the stay helped me completing the study. I thank her for her conviviality which made the working atmosphere very nice during my stay there. I also thank Julian LaBenthal for his support in learning the techniques and sharing his workbench. Without him, stay at Bradford would have been incomplete.

I am indebted to Dr. R. Ravishanker, Scientist, Molecular & Structural Biology Division, CSIR-Central Drug Research Institute, Lucknow for introducing me to the protein purification techniques and crystallization trials. His group members especially Dr. Vandana Kukshal was very kind and helpful in the field of protein research. I also thank Dr. Ashish Arora and Ms. Sarta Tripathi for helping me in Isothermal Titration Calorimetry experiments. I am also thankful to Dr. Gaya Prasad, Mr. Abhishek and Mr. Vijay for help and support during my work at Molecular and Structural Biology Division at CSIR-CDRI.

I specially wish to convey my sincere gratitude and humble regards to Prof. Raja Roy, Professor, Centre of Biomedical Magnetic Resonance, SGPGIMS Campus, Lucknow for his proper guidance, constant motivation, encouragement and support in my thesis work related to metabolic profiling using NMR spectroscopy. I wish to express special thanks to Mr. Santosh Kumar Bharti,
who showed paramount patience with me. I would not have been able to complete the study without his support and warm friendship.

I express my sincere thanks to Dr. Alok K. Pandey, Scientist, CSIR-UEC, for his unstinted support and help, always with a smile. I thank him for his friendship, enthusiasm to organize training and lab parties creating an atmosphere of friendship.

I would like to convey my sincere thanks to Drs. Rishi Shanker, Mukul Das, Bhashar dev Bhattcharj, Devendra Parmar, A. B. Pant, Kausar M Ansari, Sanjay Yadav, M.K.R. Mudiam, Devendra K. Patel and Er. A. H. Khan for their constant help and support at CSIR-UEC.

I am also thankful to Dr. Sushila Patel and Dr. Mahima Bajpayee for providing me valuable advice, timely help, active support and encouragement in completing this research programme.

The present achievement would never have been materialized without the collective support, persistent help and constant cooperation of my research colleagues Ashutosh Pathak, Ashutosh Kumar, Ritesh, Vyom and Poornam. I wish to thank them all for their constant encouragement and support.

It has been the kind blessings and encouragement of my mother Mrs. Seema Gurbani that enabled me to see the completion of this thesis work, and it's indeed their long awaited dream. Words would not be sufficient to express my gratitude to for her patience, the sacrifices made for building my career and for providing me the best of everything I ever needed.

My special gratitude is due to my wife Vanea who always stood by my side in every situation. Her good wishes and emotional support made me to overcome all sorts of hurdles. She motivated me whenever I felt short of energy and rhythm. My daughter Deeva deserves special mention as at the age of three, she has been a true darling. I really cherished every moment at home with her and felt relieved.

I am also thankful to Mr. Mayaram Amlani and Mr. Dayaram Amlani for providing me not only the strong moral values but also regular stimulation required for the accomplishment of the mission. The ascent in my career is due to their efforts and endless encouragement.

I also thank, Council of Scientific and Industrial Research, New Delhi, India for providing research fellowship during the course of this study.

Many more have helped me in this endeavor and I would like to thank them all with due apology for not including their names.

Last but not the least I would like to thank "ALMIGHTY GOD", providing me the strength to overcome every hurdle in my research pursuit.

Deepak Gurbani
