LIST OF FIGURES

Fig 1: Effect of Fungicide treatment on lethality percentage of field explants in controlling contamination during establishment of cultures.

Fig 2: Effect of Bitox on the response of tea clones in controlling fungal contamination during establishment of cultures.

Fig 3: Effect of Bavistin on the response of tea clones in controlling fungal contamination during establishment of cultures.

Fig 4: Effect of HgCl₂ on the recovery percentage of contamination free explants

Fig 5: Effect of Anti-oxidants on browning percentage in different clones

Fig 6: Effect of different basal media on response (%) of the experimental tea clones.

Fig 7: Effect of different basal media on induction of shoot buds per explant from nodal explants.

Fig 8: Effect of BAP (1-5mg/l) and GA₃ (1mg/l) on shoot multiplication from nodal explants in ½ and Full MS medium.

Fig 9: Effect of BAP (1-5mg/l) and GA₃ (1mg/l) on shoot multiplication from shoot tips in ½ and Full MS medium.

Fig 10: Effect of different media on shoot proliferation from shoot tip and nodal explants.

Fig 11: Effect of TDZ on shoot induction from nodal and shoot tip explants.

Fig 12: Effect of BAP (5 mg/l) and GA₃ (1mg/l) on shoot induction from nodal explants in ½ and Full MS medium.

Fig 13: Effect of BAP (6 and 8 mg/l) and GA₃ (1mg/l) on shoot multiplication from nodal explants during shoot multiplication in half and Full MS medium.

Fig 14: Effect of BAP (6 and 8 mg/l) and GA₃ (1mg/l) on shoot multiplication from nodal explants in half and Full MS medium.

Fig 15: Effect of higher concentrations of BAP (6-10 mg/l) and GA₃ (1mg/l) on shoot multiplication from nodal explants.

Fig 16: Effect of higher concentrations of BAP (6-10 mg/l) and GA₃ (1mg/l) on shoot multiplication from shoot tips.

Fig 17: Effect of BAP (5-10 mg/l) and Zeatin (1mg/l) on shoot multiplication from nodal explants.

Fig 18: Effect of BAP (5-10 mg/l) and Zeatin (1mg/l) on shoot multiplication from shoot tips.

Fig 19: Effect of BAP (5-10 mg/l), GA₃ (1mg/l) and IBA on shoot multiplication from nodal explants.

Fig 20: Effect of BAP (4-5 mg/l), GA₃ (1mg/l) and IAA (0.2mg/l) on shoot multiplication from nodal explants.

Fig 21: Effect of sucrose on shoot multiplication from nodal explants.

Fig 22: Effect of BAP and Kn on shoot elongation.

Fig 23: Effect of media on shoot induction from three types of explants.

Fig 24: Shoot Induction (%) from shoot tips (ST), nodal (N) and cotyledonary nodal (CN) explants of different clones

Fig 25: Effect of Cytokinins, Gibberellin and Auxin on shoot multiplication in three types of explants.

Fig 26: Effect of Cytokinins (BAP or Kn) and GA₃ on shoot elongation of microshoots from explants of In vitro germinated seedlings.

Fig 27: Effect of combination of Cytokinins (BAP+Kn) and GA₃ on shoot elongation of microshoots from explants of In vitro germinated seedlings.

Fig 28: Effect of position of the explant from the same branch from field mother bushes and In vitro germinated seedling.

Fig 29: Effect of different treatments of Auxins on induction of roots.

Fig 30: Rooting efficiency of different clones In 100mg/l IBA Shock treatment.

Fig 31: Effect of different treatments of Auxins on rooting efficiency In TV25.

Fig 32: Effect of different treatments of Auxins on length of roots in different clones.

Fig 33: Micro grafting of In vitro grown microshoots in five different clones

Fig 34: Tree Plot for RAPD markers in field micropropagated plants of TV25.

Fig 35: Tree Plot for ISSR markers in field micropropagated plants of TV25.

Fig 36: Tree Plot for RAPD Markers In In vitro germinated seedlings of TV25

Fig 37: Tree Plot for RAPD Markers In in vitro germinated seedlings In T78

Fig 38: Tree Plot for ISSR markers In in vitro germinated seedling of TV21

Fig 39: Schematic representation of Somatic embryogenesis in tea—both primary and secondary.

Fig 40: Production of primary and secondary somatic embryos in the three varieties of tea

Fig 41: Schematic representation of the vector constructs

Fig 42: Germination of untransformed and transformed secondary embryos in percentage

Fig 43: Effect of explant type and Agrobacterium strain type on efficiency of transformation (transient expression) in tea.
