

LIST OF FIGURES

Figure No.	Title	Page No.
I.	Elgon of Subject's Fosbury-flop Technique in different Phases	124
II.	The Fosbury-flop high jump technique has many characteristics: approach-run, take-off preparation, take-off, flight, L-position and landing in respect to ankle joint linear velocity	125
III.	The Fosbury-flop high jump technique has many characteristics: approach-run, take-off preparation, take-off, flight, L-position and landing in respect to knee joint linear velocity	126
IV.	The Fosbury-flop high jump technique has many characteristics: approach-run, take-off preparation, take-off, flight, L-position and landing in respect to hip joint linear velocity	127
V.	The Fosbury-flop high jump technique has many characteristics: approach-run, take-off preparation, take-off, flight, L-position and landing in respect to shoulder joint linear velocity	128
VI.	The Fosbury-flop high jump technique has many characteristics: approach-run, take-off preparation, take-off, flight, L-position and landing in respect to elbow joint linear velocity	129
VII.	A strong pronation of the ankle joint at the take-off in high jump	130
VIII.	Rotations of the body during take-off	131
1.	Graphical representation of mean values of different joints angles at approach run phase	149
2.	Illustration showing the relationship of different joints angles with performance at approach run phase	149

3.	Graphical representation of mean values of different joints angles at take-off preparation phase	151
4.	Illustration showing the relationship of different joints angles with performance at take-off preparation phase	151
5.	Graphical representation of mean values of different joints angles at take-off phase	153
6.	Illustration showing the relationship of different joints angles with performance at take-off phase	153
7.	Graphical representation of mean values of different joints angles at flight phase	155
8.	Illustration showing the relationship of different joints angles with performance at flight phase	155
9.	Graphical representation of mean values of different joints angles at L-position phase	157
10.	Illustration showing the relationship of different joints angles with performance at L-position phase	157
11.	Graphical representation of mean values of different joints angles at landing phase	159
12.	Illustration showing the relationship of different joints angles with performance at landing phase	159
13.	Graphical representation of mean values of performance and stride length	160
14.	Graphical representation of mean values of different joints linear velocity at approach run to take-off preparation phase	162
15.	Illustration showing the relationship of different joints linear velocity with performance at approach run to take-off preparation phase	162

16.	Graphical representation of mean values of different joints linear velocity at take-off preparation to take-off phase	164
17.	Illustration showing the relationship of different joints linear velocity with performance at take-off preparation to take-off phase	164
18.	Graphical representation of mean values of different joints linear velocity at take-off to flight phase	166
19.	Illustration showing the relationship of different joints linear velocity with performance at take-off to flight phase	166
20.	Graphical representation of mean values of different joints linear velocity at flight to L-position phase	168
21.	Illustration showing the relationship of different joints linear velocity with performance at flight to l-position phase	168
22.	Graphical representation of mean values of different joints linear velocity at L-position to landing phase	170
23.	Illustration showing the relationship of different joints linear velocity with performance at L-position to landing phase	170
24.	Graphical representation of mean values of different joints angular velocity with performance at take-off preparation to take-off phase	172
25.	Illustration showing relationship of different joints angular velocity with performance at take-off preparation to take-off phase	172
26.	Graphical representation of mean values of different joints angular velocity at take-off to flight phase	174

27.	Illustration showing relationship of different joints angular velocity with performance at take-off to flight phase	174
28.	Graphical representation of mean values of different joints angular velocity at flight to L-position phase	176
29.	Illustration showing relationship of different joints angular velocity at flight to L-position phase	176
30.	Graphical representation of mean values of different joints angular velocity at L-position to landing phase	178
31.	Illustration showing relationship of different joints angular velocity with performance at L-position to landing phase	178
32.	Graphical representation of linear regression of different joints angle with performance at approach run phase	181
33.	Graphical representation of linear regression of different joints angle with performance at take-off preparation phase	181
34.	Graphical representation of linear regression of different joints angle with performance at take-off phase	182
35.	Graphical representation of linear regression of different joints angle with performance at flight phase	182
36.	Graphical representation of linear regression of different joints angle with performance at L-position phase	183
37.	Graphical representation of regression of different joints angle with performance at landing phase	183

38.	Graphical representation of linear regression of different joints linear velocity with performance at approach run to take-off preparation phase	185
39.	Graphical representation of linear regression of different joints linear velocity with performance at take-off preparation to take-off phase	186
40.	Graphical representation of linear regression of different joints linear velocity with performance at take-off to flight phase	186
41.	Graphical representation of mean values of linear regression of different joints linear velocity with performance at flight to L-position phase	187
42.	Graphical representation of mean values of linear regression of different joints linear velocity with performance at L-position to landing phase	187
43.	Graphical representation of mean values of linear regression of different joints angular velocity with performance at take-off preparation to take-off phase	189
44.	Graphical representation of mean values of linear regression of different joints angular velocity with performance at take-off to flight phase	189
45.	Graphical representation of mean values of linear regression of different joints angular velocity with performance at flight to L-position phase	190
46.	Graphical representation of mean values of linear regression of different joints angular velocity with performance at flight to landing phase	190
