Acknowledgements...

First and foremost, I thank ALMIGHTY for giving me enough strength and ability to accomplish this task.

I express my profound sense of gratitude and respect to my guide Dr. Syed Mashhood Ali, under whose supervision, I had the privilege to carry out my research work. I owe my deepest gratitude to him for sharing his scientific experience and knowledge. His conceptual knowledge and discerning remarks really helped me. This thesis might have not been possible without his guidance and cooperation.

I owe a great deal to Dr. Aminul Islam, Assistant Professor, Department of Chemistry, for being my supervisor during first year of my Ph.D. and whose invaluable comments and suggestions helped me in a big way.

I pay my special thanks to the Chairman, Professor Zafar Ahmad Siddiqi Department of Chemistry, for providing me all the facilities I required during my research. I would also like to extend my sincere gratitude to all teaching and non-teaching staff of the Department of Chemistry for their help and assistance, in particular Mr. Rashid Y. Kamal and Mr. Riyasat Khan. I am thankful to University Grants Commission and Council for Scientific and Industrial Research, India for providing financial support in the form of non-NET fellowship and SRF respectively.

Most of the results described in this thesis would not have been obtained without a close collaboration with several laboratories/institutions namely Prof. P. R. Rajamohanan, Dr. Snehal Dhokle, National Chemical Laboratory, Dr. Homi Bhabha Road, Pune, India; Mr. Avtar Singh, Sophisticated Analytical Instrumentation Facility, Panjab University, Chandigarh, India; Mr. G. Crowyn, UMR 8181, UCCS, Faculte des Sciences, Jean Perrin, Rue Jean Souvraz SP, Lens, Cedex, France; Dr. Ritu Barthwal, Central NMR Facility, Indian Institute of Technology, Roorkee, India for performing both 1D and 2D NMR. I would also like to thank organizations/companies/people that provided drugs/pharmaceuticals that were used in the present research work: Mr. Geertrui Haest, Cerestar Application Centre, Food & Pharma Specialities, France; Nebula Healthcare, India; Surya Pharmaceuticals Ltd., Chandigarh, India; P. I. Pharmaceuticals Pvt. Ltd., Faridabad, India; and Mr. Vinay Kumar, Good Luck Pharma Pvt. Ltd, Ahmedabad, India.

Words are short to express my deep sense gratitude to all the juniors, seniors, lab mates, local guardians, collaborators, and friends for their guidance, suggestions, support, and encouragement. My special thanks goes to Mrs. Sana’a Danish, Dr. Sheema, Mrs. Kehkeshan, Ms. Shazia Shamim, Ms. Kulsum, Mrs. Nida, Dr. (Mrs.) Shazia Parveen, Mrs. Kahkashan Anjum, Ms. Heena, Ms. Aiman, Ms. Himani, Ms. Farah, Ms. Nisa, Ms. Naaiz, Ms. Sneha, Ms. Shama, Ms. Mumtaz, Dr. Niyaz, Dr. Abdullah, Dr. Prashant and Dr. Abuzar. My greatest appreciation goes to my sister-friend Hala, who was always been a great support in all my struggles and
frustrations during this research work. She has been a great inspiration and the most reliable person to whom I could always talk about my problems and excitements.

As a foreword: I may forget to mention some people, there are so many to thank, for every little helps, but know your contribution was appreciated.

There are no heartfelt words that could express all that my parents (Mr. Sohrab A. Khan and Mrs. Shahnaz Khan) have done for me throughout my life. They have always been a constant source of strength and inspiration right from my childhood till now. I wish to express my deepest thanks to both of my brothers (Ehtesham A. Khan and Arbab A. Khan), sister (Nazia Khan), and all other paternal and maternal relatives without them I would never have enjoyed so many opportunities. Last, but by no means least, I am indebted to all my In-laws, especially my parents In-laws and brother-in-law (Mr. Iftikhar Husain) for their endless patience, guidance and encouragement when it was most required.

The greatest thank must go to my husband (Dr. Afzal Husain), who understands the challenges of doing a Ph.D., his scientific inputs, unconditional love and care is a constant source of encouragement which always made me to feel light during tough times. Pursuing my Ph.D. has kept me away from him for a long time but what makes me to forgive myself is the hope that my better education will help to lead a better quality of life and a better future.

At the end, thanks to you, reader. If you are reading this line, you at least read one page of my thesis. Thank You.

(Shania Khan)
