Acknowledgement

The completion of my thesis and subsequent Doctoral Degree is a long cherished dream and has been a long journey. It took years for me to reach at this finishing point because of life's many challenges. I could not have reached where I am today, without the invaluable support of several people. It gives me immense pleasure in expressing my gratitude to all those special people who have supported me and had their contributions, academically and personally, throughout this work.

My humble pranams to our beloved AMMA, Sri Mata Amritanadamayi Devi for the blessings she showered upon me and giving me the opportunity to work in her institution.

First and foremost, I owe my deepest sense of gratitude to my Guide Dr Krishnaprasad Chennazhi for constant encouragement, guidance and motivation throughout my thesis work. He has been supportive since the days I began working with him more than ten years ago. His unconditional support and friendly attitude were always invaluable on both intellectual and personal level. I would also like to thank him for giving me the freedom to express my ideas, encouraging me to take up the challenges and guiding me to the right direction whenever my steps went wrong. Also, he gave me numerous opportunities for my career growth by allowing me to work with other research students and collaborating with other research groups. I could not have imagined having a better or friendlier advisor. I am fortunate to have my best friend as my thesis mentor. For all you have done for me, I have no words to thank you enough.

I sincerely thank my Co-guide Dr Deepthy Menon, who has been always there to provide invaluable suggestions throughout the work. She was always caring, and has been a source of motivation and support. I am extremely grateful to her for investing her time for my manuscript revisions and thesis correction, and especially for encouraging correct use of scientific language in publications and scientific presentations.

My deepest thanks to Dr Shantikumar Nair, distinguished Director, Amrita centre for Nanosciences and Molecular Medicine & Dean of Research, Amrita Vishwa Vidyapeetham for giving me the
opportunity to pursue my PhD along with my job as a lecturer. He sets high standards for the students, and inspires and motivates them to meet those standards. His insightful comments and constructive criticism were always thought-provoking and helpful in directing the research work in right track.

I am indebted to my doctoral committee advisor Dr Shiv Kumar Nair, Professor & Head of Cardio-Vascular and Thoracic Surgery (CVTS) for providing invaluable support throughout the work. Regardless of his extremely demanding schedule in the clinics, he was always willing to participate in the scientific discussions related to this work. His critical remarks and brilliant suggestions helped us to improve our clinical perspective in this area of work.

I am also thankful to my previous doctoral committee member Late Dr K K Haridas for his valuable inputs in the initial stages of this work. Insightful comments from Dr Benedict Raj are also gratefully acknowledged. I thank all other faculty members of Amrita Centre for Nanosciences and Molecular Medicine for their selfless support. Many of them were a source of inspiration for me.

I would like to acknowledge all the teachers I learnt from, since my childhood, for their blessing and support. Dr Lissy K Krishnan, Scientist, SCTIMST, is gratefully acknowledged who sow the seeds of passion towards my research interest. Most of the scientific skills I learnt from her lab helped me tremendously throughout my thesis work.

I wish to thank Dr AKK Unni, Dr Reshmi and all other members of the animal facility for helping with animal experiments.

From the bottom of my heart, I thank all my dear friends and colleagues for the love, encouragement and humor which made my life easy during difficult times.

I am thankful to Mr Sajin and Mr Sharath for the technical support in electron microscopy and confocal microscopy. Special thanks to Afeesh R, previous M.Tech student of our centre for his help in
the initial stages of my thesis work. My sincere thanks to Sajesh and all other members of the tissue engineering group for all the help they provided, while carrying out my experiments.

Special thanks to Mrs. Girija Natarajan and Ms. Sreeshma for all the administrative help required to complete my PhD.

Although not mentioned individually, I thank each and every member of the nano family including office staff for the enormous help they extended to me for my professional and personal growth.

I am extremely grateful to the Department of Science and Technology for funding this work through the National Nanoscience and Nanotechnology Initiative monitored by Professor C. N. R. Rao under Thematic Unit of Excellence (TUE) grant.

I express my deep sense of gratitude to Amrita Vishwa Vidyapeetham for providing substantial infrastructural support for this research work.

Words cannot replace the sacrifices that my family members made for me, during the period of my PhD work. First, I thank my parents; they’ve trained me to do hard work with self-respect and persistence, and taught me about how to be independent in life, meanwhile supported me in all possible ways whenever needed. They are role models for me in all aspects of life. They loved me and believed in me unconditionally, regardless of whatever I do in my professional life. I am privileged to have such wonderful and caring parents. I thank my brother for instilling in me the confidence and the drive to pursue the doctoral degree. He is there for me always to truly confide in all good and bad times in my life. I thank my dear husband Rajesh, who loves me unconditionally for the person that I am. Your selfless support and enduring patience have taught me much about the sacrifice and compromise. And, my sweet wonderful kids, Vishnu and Nandu, nothing in simple text can express my love for you.....

Above all, I thank ‘God’ who gave me strength and patience to move forward in life!!
