LIST OF FIGURES

Fig. 1 Adult mouse mammary gland development

Fig. 2 Temporal expression pattern of genes encoding casein alpha-S1, casein alpha-S2 (for mouse the genes are casein alpha s2-like A and casein alpha s2-like B), casein beta, casein kappa (CSN1S1, CSN1S2- (a) and (b) for mouse, CSN2, and CSN3, respectively), alpha-lactalbumin (LALBA) and albumin (ALB) in dairy cows, mouse, pig, goat, and kangaroo

Fig. 3 Schematic overview of probe array and target preparation for spotted cDNA microarrays and high-density oligonucleotide microarrays. a, cDNA microarrays b, High-density oligonucleotide microarrays

Fig. 4 Global approach towards microarray experiment

Fig. 5 Workflow for sample preparation and array processing

Fig. 6 Schematic of amplified cRNA procedure. Generation of cRNA for a two-color microarray experiment is shown

Fig. 7 (a) Dynamic range and linearity of the Spike-In controls

Fig. 7 (b) Quality Control (QC) Report as generated using Agilent Feature Extraction software

Fig. 8 An array representing one-color microarray image

Fig. 9 Signal intensity comparison plot between experimental replicates

Fig. 10 Median %CV of the replicated probes per microarray

Fig. 11 Median %CV of the normalized signals of the three replicated experiments

Fig. 12 Expected "butterfly plot" with the mixed RNA samples

Fig. 13 Normalized intensity values versus sample concentration

Fig. 14 Pie charts of the major biological process (a) and molecular function (b) ontology categories associated with the significantly differentially expressed genes in the buffalo mammary transcriptome
Fig. 15 Overall expression pattern of 16 genes evaluated in mammary tissues from different physiological stages

Fig. 16 Average expression stability measures (M) for housekeeping genes upon sequential exclusion of genes with the largest expression level variance

Fig. 17 Relative mRNA level of ABC, GLUT transporters and regulator genes in mammary gland tissues of buffalo from different physiological stages

Fig. 18 Summary of sequencing data of 1031 cDNA clones from Lac-MG and Nlac-MG cDNA libraries

Fig. 19 Distribution of significant homology of buffalo mammary gland derived ESTs with sequences from different species

Fig. 20 Representation of cellular distribution of buffalo mammary gland ESTs

Fig. 21 Distribution of buffalo mammary gland ESTs based on molecular function

Fig. 22 Distribution of buffalo mammary gland ESTs for different binding activities
