Abstract  iv
Acknowledgements  v
Table of Contents  vi
Preface  viii
Notations and abbreviations  xii

1 Introduction to some stochastic orders and reliability concepts  1
  1.1 Some stochastic orders and some reliability concepts  1
  1.1.1 Definitions of some stochastic orderings  1
  1.1.2 Examples of some stochastic orderings  3
  1.2 Relationships between orderings  5
  1.2.1 Definitions of some reliability concepts  5
  1.2.2 Relationship between few reliability concepts  7
  1.3 Some definitions for discrete lifetimes  8
  1.3.1 Definitions of some reliability concepts for discrete lifetimes  8
  1.3.2 Definitions of some stochastic orderings for discrete lifetimes  10

2 On reliability concepts for discrete lifetime random variables  11
  2.1 Introduction  11
  2.2 Examples and discussion  12
  2.2.1 Summary of examples  18
  2.3 Stochastic orderings and some new results  19
  2.3.1 Some new results  19
3 Relationship between certain classes of lifetime distributions and some stochastic orderings 21
  3.1 Introduction ....................................................... 21
  3.2 Main results ...................................................... 22

4 On stochastic orderings among equilibrium, residual lifetime and derived random variables 34
  4.1 Introduction ....................................................... 34
  4.2 Stochastic orderings among some random variables .................... 35
  4.3 Closure of NBUE class under a shock model ........................ 38
  4.4 On residual lifetime at random time ................................ 39
  4.5 Stochastic comparison properties .................................. 42

5 On NBUL class of lifetime distributions and replacement policy comparisons 45
  5.1 Introduction ....................................................... 45
  5.2 Some properties of NBUL class ..................................... 46
  5.3 A replacement policy comparison ................................... 48
  5.4 Closure of NBUL class under formation of parallel systems ............ 50

6 On classification of bivariate exponential distribution functions and some properties of bivariate residual lifetimes 53
  6.1 Introduction ....................................................... 54
  6.1.1 Definitions of a few reliability concepts ........................ 54
  6.2 A study on bivariate exponential distributions ....................... 55
  6.3 A study on bivariate residual lifetime random vectors .................. 57

7 A note on \( \mathcal{L} \) class of distributions in reliability 59
  7.1 Introduction ....................................................... 59
  7.2 A result on class \( \mathcal{L} \) ......................................... 60
  7.3 Generalizations of Laplace ageing classes ............................ 62
    7.3.1 The \( \mathcal{L}_G \) class ........................................... 62
    7.3.2 The modified \( \mathcal{L}_G \) class ................................. 65
