ACKNOWLEDGEMENTS

It is indeed my pleasure to thank Dr. D.R. Bhawalkar, M.Sc., Ph.D. (Lond.), (Retd.) Professor of Physics, University of Saugor. He not only suggested me the problem but also encouraged me from time to time. He steered me through all the difficulties I encountered as a research scholar there.

Dr. J.D. Panade, the present Head of the Department, has always been very kind to me, and provided all necessary facilities for the work. He too has contributed a good deal in my research by way of helpful discussions, and for all this I shall ever remain deeply indebted to him.

Dr. J.K. Zope, Reader in Physics, Nagpur University, was my guide and, therefore, shared maximum responsibility and burden involved in the task. He has critically gone through every small detail in my experimental and written work, and helped me out whenever I came across some difficulty. Without his inspiring guidance, I am sure, I would not have been able to complete my thesis, and bring it to this shape. I must record my sincere gratitude to him for all that he has done for me.

Dr. C. Mande and Mr. G.N. Navaneeth of the Nagpur University Physics Department, also took keen interest in
my endeavour and helped me in numerous ways, materially and otherwise. It is simply not possible for me to express in words alone, how much I owe to them on this account.

I am grateful to Dr. R.N. Bapat, formerly the Head of the Physics Department, Government College of Science, Nagpur, for the consideration he had for me and my welfare ever since I was a student under him.

I am obliged to my friends, colleagues and teachers in this Institute and elsewhere, who have directly and indirectly contributed towards this humble venture of mine.

Finally, I thank the Government of Maharashtra, my employers, for the grant of study leave. to carry out the research activity at Saugor.

Nagpur, (P.G. Walunjkar)
22nd February 1970.
