CONTENTS

CHAPTER – I : INTRODUCTION AND REVIEW 1-73

1.1. General Introduction

1.2. Characteristics and Importance of Coordination Chemistry

1.3. Survey of Literature of Metal Complexes of Drugs

1.4. Importance of Present Work

1.5. References

CHAPTER – II : METHODS USED IN THE PRESENT INVESTIGATIONS 74-98

2.1. Molar Conductance

2.2. Magnetic Measurements

2.3. Electronic Spectroscopy

2.4. Infrared Spectroscopy

2.5. References

CHAPTER– III : EXPERIMENTAL 99-117

3.1. Materials and Methods

3.2. Method of Isolation of the Complexes

3.3. Experimental Data

3.4. References

CHAPTER– IV : RESULTS AND DISCUSSION 118-163

4.1. Stereochemistry of the Complexes : General Discussion
4.2. Complexes of Diclofenac Sodium
4.3. Complexes of Mefenamic Acid
4.4. Complexes of Flufenamic Acid
4.5. Complexes of Piroxicam
4.6. References

CHAPTER – V : BIOLOGICAL ACTIVITY 164-191

5.1. General Introduction of Pharmacology
5.2. General Introduction of Antiinflammatory
5.3. Antiinflammatory Activity of Diclofenac Sodium Complexes
5.4. Antiinflammatory Activity of Mefenamic Acid Complexes
5.5. Antiinflammatory Activity of Flufenamic Acid Complexes
5.6. Antiinflammatory Activity of Piroxicam Complexes
5.7. Comparative Activity of NSAIDS and their Complexes
5.8. References

CHAPTER – VI : SUMMARY AND CONCLUSION 192-197

APPENDICES : 198-202

I. Some Properties of the Useful Transition Metals
II. Some Properties of the Ligands (Drugs)
III. Milligram Equivalents of Metal Ions in Complexometric EDTA Titrations
IV. Some Conversion Factors

Publications 203
