Learning and memory are the probably most important areas of psychology which attract a huge no. of researchers. In addition to the factors related to the learning materials/methods of learning, some individual factors such as personality and the level in intelligence are also found to influence the learning and memory processes significantly.

Personality is the sum of the unique psychological qualities of an individual that influence a variety of characteristics behaviour pattern (both overt and covert) in relatively consistent ways across different situations and over time. Eysenck has done a lot of work in the area of personality. He categorized the personality in two major dimensions :- Introversion - Extroversion and Neuroticism (Stability and Unstability). Later on a third dimension, psychoticism was also introduced.

The present piece of research is a combination of personality dimensions - Extraversion and Neuroticism, and the two levels of intelligence - High intelligence and Average intelligence in relation to the retrievability. The study attempts to investigate the possible influence of individual differences in Extraversion/neuroticism dimension of personality and levels of intelligence on
learning and memory.

I with great pleasure express my deep sense of gratitude, indebtedness to Dr. Nov Ratten Sharma, my supervisor for his excellent guidance, constant encouragement, constructive criticism, valuable suggestions and untiring efforts made during the preparation of this project report. In deed I am thankful to him beyond adequate expression.

With deep sense of gratitude I also acknowledge my thanks to Dr. I.S. Muhar, Dean faculty of Social Sciences for his able suggestions and encouragements.

I am also deeply indebted to Dr. Rajbir Singh Hooda, Prof. and Head, Department of Psychology, M.D. University, Rohtak for graciously extending all the necessary facilities in the department to me.

I feel obliged to express my sincere thanks to all the respected teachers and the laboratory staff of the Psychology Department who helped and encouraged me at different stages.

May I also express my sincere thanks to all friends and authors whose work I have frequently consulted and quoted in this study.

Lastly, I am grateful to Dr. Karm Singh Rathee a Principal, M.K.J.K. College Rohtak for extending me
full support and co-operation in the data collection process.

I am also highly indebted to all students who worked as subjects, for their co-operation.

Rohtak
