## 1 Introduction

1.1 History  
1.2 Occurrence  
1.3 Manufacture  
1.4 Properties  
1.5 Quality specifications and testing  
1.6 Storage and transportation  
1.7 Toxic hazards  
1.8 Safety  
1.9 Uses  
1.10 Global scenario  
1.11 World resources  
1.12 World review of bromine compounds  
1.13 Market outlook of bromine compounds  
1.14 Bromine related industries in India and their effluents  
  1.14.1 Bromine manufacturers in India  
  1.14.2 Liquid bromine imported in India  
  1.14.3 Foreign exchange spent towards liquid bromine imported in India  
  1.14.4 Sodium bromide imported in India  
  1.14.5 Foreign exchange spent towards sodium bromide imported in India  
  1.14.6 Potassium bromide imported in India  
  1.14.7 Foreign exchange spent towards potassium bromide imported in India  
  1.14.8 Analysis of data  
  1.14.9 Classified reactions of bromine  
  1.14.10 Effluents as bromine feed source  
1.15 Aim and significance of work

## 2 Techno Economic Recovery at Industrial Scale

2.1 Removal of excess alkalinity of effluent-A
2.2 Removal of excess alkalinity of effluent-A by spent sulfuric acid

2.3 Removal of excess alkalinity of effluent-A by hydrobromic acid and enhancing the sodium bromide concentration

2.4 Removal of excess alkalinity of effluent-A by liquid bromine & enhancing the sodium bromide concentration

2.5 Effluent-C processed to align with effluent-A1, effluent-A2 and effluent-A3

2.6 Recovery of bromine as liquid bromine from processed effluent-A, i.e. effluent-A1, effluent-A2 and effluent-A3 and effluent-C

2.6.1 Basic reaction

2.6.2 Bromine manufacture

2.6.3 The Steaming out process

2.7 Experimental

2.7.1 Process description

2.7.2 The schematic flow diagram for liquid bromine

2.8 Recovery of liquid bromine from effluent-A1

2.9 Recovery of liquid bromine from effluent-A2

2.10 Recovery of liquid bromine From effluent-A3

2.11 Recovery of liquid bromine from effluent C1

2.12 Bromides of group 1(A) metals with specific reference to sodium and potassium bromide.

2.13 Experimental

2.13.1 Basic reaction

2.13.2 Process description: sodium bromide / potassium bromide

2.13.3 Process description of sodium bromide from effluent-A2 and A3

2.13.4 Process description of potassium bromate and potassium bromide simultaneously

2.13.5 The schematic flow diagram for sodium bromide / potassium bromide by directly reacting bromine generated from industrial effluents-A1, A2, A3 and C1

2.13.6 The schematic flow diagram for sodium bromide directly from effluent-A2 and A3

2.13.7 The schematic flow diagram for potassium bromate by reacting bromine generated from effluent-A1, A2, A3 and C1 in absence of catalyst and so generated potassium bromate recovered based on its solubility pattern followed by recovery of potassium bromide from the mother liquor of potassium bromate
2.14 Manufacture of sodium bromide from recovered bromine from effluent-A1, A2, A3 and C1
2.15 Recovery of sodium bromide directly from effluent-A2 and effluent-A3
2.16 Manufacture of potassium bromide from recovered bromine from effluent-A1, A2, A3 and C1
2.17 Manufacture of potassium bromate chemically from recovered bromine from effluent-A1, A2, A3 and C1
2.18 Recovery of potassium bromide from the mother liquor of potassium bromate
2.19 Alkyl bromides from effluent-A2 with specific reference to n-propyl bromide
   2.19.1 General methods of organic bromination
   2.19.2 Physical properties of n-propyl bromide
2.20 Recovery of n-propyl bromide from effluent-B
2.21 Experimental
   2.21.1 Reaction
   2.21.2 The schematic flow diagram for decomposition of effluent-B followed by manufacture of n-propyl bromide from the decomposed effluent
2.22 Decomposition of effluent-B
2.23 Manufacture of n-propyl bromide from effluent-B1

3 Evaluation of recovered product
3.1 Summary of analytical evaluation (Conducted in our laboratory and elsewhere)
   3.2.1 Analysis of bromine recovered from effluent-A1
   3.2.2 Analysis of bromine recovered from effluent-A1
   3.2.3 Analysis of bromine recovered from effluent-A1
   3.3.1 Analysis of bromine recovered from effluent-A2
   3.3.2 Analysis of bromine recovered from effluent-A2
   3.4.1 Analysis of bromine recovered from effluent-A3
   3.4.2 Analysis of bromine recovered from effluent-A3
   3.4.3 Analysis of bromine recovered from effluent-A3
   3.5.1 Analysis of bromine recovered from effluent-C1
   3.5.2 Analysis of bromine recovered from effluent-C1
3.6.1 Analysis of sodium bromide from recovered bromine from effluent- A1, A2, A3 and C1

3.6.2 Analysis of Sodium bromide from recovered bromine from effluent- A1, A2, A3 and C1

3.7.1 Analysis of sodium bromide recovered directly from effluent- A2 and A3

3.7.2 Analysis of sodium bromide recovered directly from effluent- A2 and A3

3.7.3 Analysis of sodium bromide recovered directly from effluent- A2 and A3

3.8.1 Analysis of potassium bromide from recovered bromine of effluent- A1, A2, A3 and C1

3.8.2 Analysis of Potassium bromide from recovered bromine of effluent- A1, A2, A3 and C1

3.8.3 Analysis of Potassium bromide from recovered bromine of effluent- A1, A2, A3 and C1

3.9.1 Analysis of potassium bromate recovered chemically from recovered bromine of effluent- A1, A2, A3 and C1

3.9.2 Analysis of Potassium bromate recovered chemically from recovered bromine of effluent- A1, A2, A3 and C1

3.9.3 Analysis of Potassium bromate recovered chemically from recovered bromine of effluent- A1, A2, A3 and C1

3.10.1 Analysis of potassium bromide recovered from the mother liquor of potassium bromate

3.10.2 Analysis of Potassium bromide recovered from mother liquor of Potassium bromate

3.11.1 Analysis of n-propyl bromide from effluent-B1

3.11.2 Analysis of n-propyl bromide from effluent-B1

3.11.3 Analysis of n-propyl bromide from effluent-B1

3.11.4 Analytical method for characterisation of product n-propyl bromide by Gas Chromatography

4 Evaluation of technical & economical aspect

4.1 Bromine economics

4.2 Basic raw material cost

4.3 Economic evaluation of liquid bromine recovered

4.4 Basic raw material cost for bromides, bromate & organic bromide

4.5 Economic evaluation of sodium bromide manufacture
5 Results and Discussion

5.1 Results and discussion of liquid bromine recovery
5.2 Results and discussion of sodium bromide / potassium bromide recovery
5.3 Results and discussion of manufacture of potassium bromate chemically and simultaneous manufacture of potassium bromide
5.4 Results and discussion of n-propyl bromide recovery

* Photograph of erection and commissioning of liquid bromine plant form industrial waste
* Photograph of liquid bromine distillation and condensation
* Photograph of liquid bromine bottling

Abbreviations

Effluent A- Effluent from a pesticide industry located in the southern belt of Gujarat
Effluent B- Effluent from a pesticide industry located in the Saurashtra
Effluent C- Effluent from a pharmaceutical intermediate manufacturing unit located in the central part of Gujarat
Effluent A₁- Final effluent after treatment with spent sulphuric acid
Effluent A₂- Final effluent after treatment with hydrobromic acid
Effluent A₃- Final effluent after treatment with liquid bromine
Effluent B₁- Final effluent after alkali treatment
Effluent C₁- Final effluent after dilution with water
