List of Tables and Figures

Tables

1. Showing the mean avoidance latencies of different ECS intensity groups and the control group on retention test I, II, III, IV and V.

2. Showing the significance of difference between the means of different ECS intensity groups and control group on retention test I, II and III.

3. Showing the significance of difference between the means of different ECS intensity groups and control group on retention test IV and V.

4. Showing the significance of difference between the mean latencies of the same groups on different retention tests.

Figures

1. Showing the structural relationship of endogenous opioids with $\beta$-Lipotropin.

2. Showing the possible influence of enkephalin neurons via presynaptic inhibition.

3. Showing the distribution of enkephalin and $\beta$-lipotropin in the rat brain and the spinal cord.

4. Showing the mean latencies of different ECS intensity groups and the control group on retention test I (1 day).

5. Showing the mean latencies of different ECS intensity groups and the control group on retention test II (2 days).

6. Showing the mean latencies of different ECS intensity groups and the control group on retention test III (7 days).
Figure 7: Showing the mean latencies of different ECS intensity groups and the control group on retention test IV (14 days).

Figure 8: Showing the mean latencies of different ECS intensity groups and the control group on retention test V (30 days).

Figure 9: Showing the mean latencies of different each ECS intensity group and the control group on different retention tests.
