ACKNOWLEDGEMENTS

This work embodies the results of research work conducted by me since last three years.

Many a people contributed to this piece of work. Some contributions were evident, but special mention is to be made of non-evident helping hands that were of immense help. I wish to place a special vote of thanks to such persons.

The deepest sense of gratitude is attributed to my guide and patron Prof. V.K. Saxena without whose dextrous guidance, preparing this manuscript would have been an arduous task. Mrs. Neelam Saxena needs a special mention, she stood by me as a continuous source of encouragement, when the days seemed gloomy and the aspirations seemed to fade away.

I express my sincere gratitude to Professor S.P. Banerjee, Head, Department of Chemistry for providing necessary laboratory facilities. I thank Professor K.M. Vyas (Head Botany Department) for authenticating the flora which I used for the investigations. Dr. Janak Ahi (Asst. Prof. Zoology Department) and Sadhna Jain extended their help during the pharmacological investigations.
