Table of Contents	iii
List of Tables	vi
List of Figures	vii
Declaration	xvi
Certificate	xvii
Acknowledgements	xviii
Preface	xx
1 A Brief Introduction to Liquid crystal Physics	1
1.1 Phases of Liquid crystal	2
1.2 Order Parameter	4
1.2.1 Orientational Order	6
1.3 Phenomenological free energy and Maier Saupe Theory	12
1.3.1 Landau's theory of Phase transition	12
1.3.2 Maier-Saupe Theory	15
1.4 Effect of Confinement	18
1.4.1 Anchoring Energy and Extrapolation length	19
1.5 Models studied	25
1.5.1 Lebwohl Lasher Model	26
1.5.2 Biaxial Liquid Crystal Model	27
1.5.3 Luckhurst Elastic Model	29
Bibliography	33
2 Brief Introduction to Computer Simulations	38
2.1 Computer Simulation - An Integrating Tool	38
2.2 Monte Carlo Simulations	41
2.3 Metropolis Algorithm	42
2.4 Boltzmann sampling	44

2.5	Non-Boltzmann Sampling	48
2.6	Computer simulations of Liquid Crystals	50
2.7	Computation of the different parameters	52
2.7.1	Period Boundary Conditions	52
2.7.2	Average Energy and Specific Heat (C_V)	52
2.7.3	Order parameters	53
Bibliography		58
3	Structures and Transitions in Hybrid Film of Uniaxial Molecules	60
3.1	Planar Hybrid Film	60
3.1.1	System studied and Model used	66
3.1.2	Effect of change in temperature	68
3.1.3	Effect due to change in anchoring strength (ξ_1, ξ_{nz}) of both the substrates	73
3.1.4	Effect due to the variation in the thickness of the liquid crystal layers -'d'	75
3.2	A Special Case – Cylindrical Hybrid films:	85
3.2.1	Modeling of hybrid films enclosed between two concentric cylinders:	88
3.2.2	Results and Discussion on cylindrical hybrid films	91
3.2.3	Cylindrical Hybrid films [2, 8 ; A1, R2; 0.5, 1.0]	93
3.2.4	Cylindrical Hybrid films [2, 8 ; A1, R2; 0.48, 1.0]	95
3.2.5	Conclusions	103
Bibliography		105
4	Phase diagram of a biaxial liquid crystal: A Monte Carlo study	110
4.1	Introduction	110
4.2	Model Used and Computational details.	118
4.3	Results and Discussion	121
4.3.1	Simulation details for $\Gamma = 0.0$	121
4.3.2	Simulation details for $\Gamma = 0.1$	123
4.3.3	Simulation details for $\Gamma = 0.2$	127
4.3.4	Simulation details for $\Gamma = 0.3$	127
4.3.5	Simulation details for $\Gamma = 0.4$	131
4.3.6	Simulation details for $\Gamma = 0.5$	131
4.3.7	Simulation details for $\Gamma = 0.6$	134
4.3.8	Simulation details for $\Gamma = 0.7$	136
4.3.9	Simulation details for $\Gamma = 0.8$	136
4.3.10	Simulation details for $\Gamma = 0.9$	142
4.3.11	Simulation details for $\Gamma = 1.0$	142
4.4	Conclusions	148
Bibliography		151

5	Structures and transitions in hybrid films of biaxial molecules	156
5.1	Introduction	156
5.2	Hybrid film of Uniaxial Molecules	157
5.3	Model Used and System studied	159
5.4	Results and Discussions	161
5.4.1	Variation of director configuration with temperature	162
5.4.2	Variation of director configuration with anchoring strength (ϵ_{nz})	168
5.5	Conclusions	188
	Bibliography	191
6	Anchoring Transition and Influence of Director Fluctuations in Liquid Crystal Droplets	194
6.1	Introduction	194
6.2	Hamiltonian Used and Details of simulations	200
6.3	Results and discussion	203
6.4	Conclusions	215
	Bibliography	216
7	Conclusions	221
