ACKNOWLEDGEMENT

It is my prime duty to express my deepest gratitude to my Research Supervisor, Dr. H.V. Tiwary, who not only inspired me to take up this research work but also encouraged me constantly in bringing it to this stage of completion. Submission of this thesis would not have been possible without his keen interest in my work along with his learned guidance throughout my research tenure. Inspite of his very busy schedule, he was always available for constructive discussions followed by his invaluable suggestions. I have no words to express my indebtedness towards him.

I am grateful to Dr. R.K. Thakur, Head of the Physics Department, ravinankar University, Raipur for providing all facilities to me in the department and encouraging me throughout.

My sincere thanks are due to Shri K.P. Chaube, Ex-Vice Chancellor and Dr. B.K. Shrivastava, the present Vice Chancellor for giving me their elderly advice and blessings from time to time.

I must also thank the University Grants Commission and my own University for granting the scholarship thereby helping me financially.
It is my pleasant duty to thank my fellow workers in the ferroelectric Research group viz. Dr. K.P. Sarbhai, Dr. V.N. Gao, Shri R.B. Sao, Shri M.P. Gupta and Dr. V.K. Mohaseby for their valuable suggestions and full cooperation. My other research colleagues and friends in the department of Physics and Chemistry also deserve my thankfulness for their readily sponsored help.

I also acknowledge with thanks the ferroelectric liquid crystal, 5Bi2.5Na0.5SO4, so kindly sent to me by Dr. K.L. Keller of University de Paris-Sud, Centre d'Orsay, Laboratoire de Physique des Solides Batiment d'Orsay, France for the standardization of our technique of pyro measurement in liquid crystals.

I find no words to express my abiding gratitude to my mother whose encouragement, sense of sacrifice and blessings proved to be of immense value in the successful completion of my research work and deep affection shown by my brothers and sisters.
