**1. Introduction**

1.1 Nutraceutical and Functional Food

1.1.1 Fermented Functional Food

1.2. Angkak (Chinese Fermented Rice)

1.3. References

**2. Review of Literature**

2.1. Fermented Functional Food

2.1.1. Chinese Fermented Foods

2.2. Angkak (A Chinese Functional Food)

2.2.1. Historical Background

2.2.2. Fermentative Production

2.2.3. Micro Flora in Angkak

2.2.4. Production of Angkak by Solid-State Fermentation

2.2.5. Chemical Constituents of Angkak

2.2.6. Mycotoxin of Monascus

2.2.6. Bioactivity of Angkak

2.3. References

**3. Objectives & Rationale**

3.1. Objectives

3.2. Rationale
4. Experimental 38-65
  4.1 Materials 38
  4.2 Methods 40
    4.2.1. Angkak Production by Monoculture 40
    4.2.2. Angkak Production by Co-culture 48
    4.2.3. Change of Mycotoxin (Citrinin) Concentration in Angkak 56
    4.2.4. Pharmacological Activity of Angkak 58
  4.3. References 63

5. Results 66-150
  5.1. Analysis of Lovastatin in Angkak Sample 66
  5.2. Angkak Production by Monoculture 69
  5.3. Angkak Production by Co-culture 89
  5.4. Change of Mycotoxin (Citrinin) Concentration in Angkak 115
  5.5. Pharmacological Activity of Angkak 129

6. Discussion 151-170
  6.1. Angkak Production under Monoculture Condition 151
  6.2. Angkak Production under Co-culture Condition 154
  6.3. Change of Mycotoxin (Citrinin) Concentration during Fermentation 157
  6.4. Anti Hyperlipidemic Effect of Angkak in Animal Model 160
  6.5. Findings of Research Study 162
  6.6. References 167

7. Conclusion and Future Prospects 171-172

8. Appendices 174-176

Figure 5.19. Kinetics of lovastatin and citrinin formation during solid-state fermentation in medium containing 3% and 5% hexanoic acid.

Figure 5.20. Change of body weight (g) of rats during experimental period

Figure 5.21. Comparison of serum total cholesterol (mg/dl) level of hypercholesterolemia controls groups G3 (I), groups G3 (III) animals fed with angkak 1 (1g/kg) and group G3 (VIII) animal fed with standard drug lovastatin (10mg/kg) during treatment period.

Figure 5.22. Comparison of serum total triglyceride (mg/dl) level of hypercholesterolemia controls groups G3 (I), groups G3 (III) animals fed with angkak 1 (1g/kg) and group G3 (VIII) animal fed with standard drug lovastatin (10mg/kg) during treatment period.

Figure 5.23. Comparison of serum low density lipoprotein LDLc (mg/dl) level of hypercholesterolemia controls groups G3 (I), groups G3 (III) animals fed with angkak 1 (1g/kg) and group G3 (VIII) animal fed with standard drug lovastatin (10mg/kg) during treatment period.

Figure 5.24. Atherogenic index of plasma (AIP) of different animal groups after the treatment period.

Figure 5.25. Histopathological section of lungs (100X) of rat belonging to group G3 (V), where A, AL, B, BC, SB, RD represents artery, alveoli, bronchiole, bronchial cartilage, small bronchus and respiratory duct, respectively.

Figure 5.26. Histopathological section of lungs (100X) of rat belonging to group G3 (I), where A, B, SB, RD represents artery, bronchiole, small bronchus and respiratory duct, respectively.

Figure 5.27. (400X) Histopathological section of lungs of rat, belonging to group G3 (I), showing normal alveolus and respiratory duct (RD).
Figure 5.28. (100X) Histopathological section of lungs of rat belonging to group G3 (VII), where B, BC, SB, RD represents bronchiole, bronchial cartilage, small bronchus and respiratory duct, respectively.

Figure 5.29. (400 X) Histopathological section of lungs of rat belonging to group G3 (VII), where BL, AAS represents bronchiole lumen and alveolar air space, respectively.

Figure 5.30. (100 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (I), where A, DF-CT, SM represents adipose tissue, dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.31. (400 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (I), where A, DF-CT, SM represents adipose tissue, dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.32. (100 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (VIII), where DF-CT; SM represents dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.33. (400 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (VIII), where DF-CT; SM represents dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.34. (100 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (III), where A, DF-CT, SM represents adipose tissue, dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.35. (400 X) Histopathological section of abdominal skeletal muscle of rat belonging to group G3 (III), where DF-CT; SM represents dense fibrous connective tissue and skeletal muscle, respectively.

Figure 5.36. (100 X) Histopathological section of renal cortex of rat belonging to group G3 (VII), where C, RC, G represents capsule, renal corpuscles and glomerulus, respectively.

Figure 5.37. (400 X) Histopathological section of renal cortex of rat belonging to group G3 (VII), where G, BS, P, D represents glomerulus, Bowman's space, proximal tubule and distal tubules, respectively.
Figure 5.38. (100 X) Histopathological section of renal medulla of rat belonging to group G3 (VII), where T represents renal tubules, all tubules are approximately parallel. The larger tubules in this image are collecting ducts. The smaller tubules are loop of henle.

Figure 5.39. (400 X) Histopathological section of renal medulla of rat belonging to group G3 (VII), where cd, dt, ts represents collecting duct, distal tubule, and loop of henle, respectively.

Figure 5.40. (100 X) Histopathological section of renal cortex of rat belonging to group G3 (V), where RC and G represents renal corpuscles and glomerulus respectively.

Figure 5.41. (400 X) Histopathological section of renal cortex of rat belonging to group G3 (V), where G, BS, p, d and md represents glomerulus, Bowman’s space, proximal tubule, distal tubules and macula densa, respectively.

Figure 5.42. (400 X) Histopathological section of renal medulla of rat belonging to group G3 (V), where cd, dt, ts represents collecting duct, distal tubule and loop of henle, respectively.

Figure 5.43. (100 X) Histopathological section of liver lobule of rat belonging to group G3 (V), where CV and S represents central vein and sinusoids, respectively.

Figure 5.44. (400 X) Histopathological section of liver lobule of rat belonging to group G3 (V), where CV, S and HC represents central vein, sinusoids and hepatocytes, respectively.

Figure 5.45. (400 X) Histopathological section of liver portal area (portal triads) of rat belonging to group G3 (V), where PV, BD, HA represents portal vein, bile duct and hepatic artery, respectively.

Figure 5.46. (100 X) Histopathological section of liver lobule of rat belonging to group G3 (VII), where CV and S represents central vein and sinusoids, respectively.
Figure 5.47. (400 X) Histopathological section of liver lobule of rat belonging to group G3 (VII), where CV and S represents central vein and sinusoids, respectively.

Figure 5.48. (400 X) Histopathological section of liver portal area (portal triads) of rat belonging to group G3 (VII), where PV, BD, HA, CT represents portal vein, bile duct hepatic artery and connective tissue, respectively.

LIST OF PHOTOGRAPHS

Photograph 5.1. Angkak produced by *Monascus purpureus* MTCC 369 under monoculture in 14\(^{th}\) day (a) and in 18\(^{th}\) day (b) of solid-state fermentation in rice based medium.

Photograph 5.2. Angkak produced by *Monascus ruber* MTCC 1880 and *Monascus purpureus* MTCC 369 under co-culture in 14\(^{th}\) day (a) and in 18\(^{th}\) day (b) of solid-state fermentation in rice based medium.

Photograph 5.3. Angkak produced by *Monascus purpureus* MTCC 369 under monoculture in 11\(^{th}\) day of solid-state fermentation in rice based medium containing 5% decanoic acid.
