List of Figures and Tables

Figure 1 : Arachidonic acid metabolism
Figure 2 : The Cyclooxygenase pathway
Figure 3 : Lipoxygenase pathways
Figure 4 : Chemical structure of Celecoxib
Figure 5 : (A) Patient with psoriasis (B) Patient with Non Bullous Congenital Ichthiosis (NCIE) (C) Metabolic pathway of 12-R-LOX in the maintenance of epidermal lipid barrier.
Figure 6 : Macroscopic appearance of wild-type and 12-R-LOX−/− mice at birth, and 2 and 3 h after birth.
Figure 7 : Chemical structure of Baicalein
Figure 8 : RT-PCR analysis of LOX/COX genes in Human epidermoid carcinoma cell line (A431) and its comparison with normal mouse skin fibroblast cell line (NIH3T3).
Figure 9 : Effect of celecoxib (A) and baicalein (B) on the growth of A431 cell line by MTT assay at 48 h post treatment.
Figure 10 : Effect on metabolites and inhibitors of 12-LOX and COX-2 on A431 cells. [3H]Thymidine Incorporation Assay was done to check the effect of inhibitors and metabolites of 12-R-LOX, 12-S-LOX and COX-2 on A431 cells.
Figure 11 : Phase-contrast microphotographs of A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 12 : Confocal microscopic analysis of A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 13 : Flow cytometric analysis of DNA content in A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h, showing induction of apoptosis.
Figure 14 : Detection of in vivo apoptosis in A431 cells was performed using the TdT-mediated dUTP-biotin nick labeling (TUNEL) method.
Figure 15 : Mitochondrial membrane potential of A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h as estimated by Rhodamine 123 staining and FACS analysis.
Figure 16 : Release of cytochrome c from the mitochondria measured using western blot analysis.
Figure 17 : Estimation of the Bcl-2/Bax ratio was done using Western blot analysis.
Figure 18 : Fold Increase in the caspase 3 activity of A431 cells after treatment with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 19 : Western Blot analysis showing the PARP cleavage leading to the generation of 85 kDa protein as a result of caspase 3 activity.
List of Figures and Tables

Figure 20 : RT-PCR analysis of COX-1, COX-2, 12-S-LOX, 12-R-LOX and GAPDH after treatment with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 21 : Western Blot analysis of p-Akt and Akt levels of A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 22 : Western Blot analysis of p-ERK and ERK levels of A431 cells treated with baicalein (100µM), celecoxib (60µM) and both baicalein (100µM) and celecoxib (60µM) for 48h.
Figure 23 : Effects of metabolites and inhibitors of 12-LOX and COX-2 on the ERK and p-ERK levels.
Figure 24 : Effects of metabolites and inhibitors of 12-LOX and COX-2 on the Akt and p-Akt levels.
Figure 25 : Flourimetric assay of caspase 3 activity
Figure 26 : Effect of 12-LOX and COX-2 metabolites and inhibitors on nuclear translocation of NF-κB in A431 cells.
Figure 27 : Effect of 12-LOX and COX-2 metabolites and inhibitors on nuclear translocation of AP-1 in A431 cells.
Figure 28 : (A) Photographs taken on dissected animals showing the tumor. (B) Bar graphs showing the reduction in the tumor weight drawn using sigma plot 9.
Figure 29 : Haematoxylin and Eosin (H&E) staining of tumor sections.
Figure 30 : In situ apoptosis detection (TUNEL) in tumor sections.
Figure 31 : Proposed mechanism of induction of apoptosis in A431 cells by baicalein and celecoxib.
Figure 32 : Schematic overview of the proposed signaling pathways involved in the survival and apoptosis in A431 cells mediated by 12-LOX and COX-2 pathways.
Figure 33 : Schematic representation of the proposed mechanisms involved in the promotion of growth in A431 cells by 12-LOX and COX-2 pathways and the inhibition in the growth by baicalein and celecoxib.
Table 1 : RT-PCR primers for the expression analysis of LOX/COX genes in A431 cells.
Table 2 : RT-PCR primers for the expression analysis of LOX/COX genes in NIH3T3 cells.
