CONTENTS

Materials and Methods

- 31

Isolation of fungi - 13. Screening of fungi for organic acid production - Primary screening - 13; Secondary screening - 14. Analytical procedures - Chromatographic procedure - Chromatography - 14; Colorimetry - 15; Gravimetric procedure - 16. Estimation of mold growth - 17. Estimation of residual sugar - 17. Assay of acid and alkaline phosphatases - Enzyme preparation - 18; Enzyme assay - 19. Isolation and Identification of Tartaric acid - Isolation - 19, Identification - Silver mirror test - 20; Resorcinol test - 20; Fenton test - 20; Ammonium metavanadate test - 21; Melting point test - 21. Experimental studies - Effects of basal medium - 22; Incubation period - 23; pH - 24; Temperature - 24; Carbon source - 24; Nitrogen source - 25; C/N ratio - 25; K_2SO_4 concentration - 26; Source and concentration of phosphorus - 26; trace elements - 27. Alcohols - 28. Utilization of crude carbohydrate sources - 29. Mutational studies - 30.

Results and Discussion

- 32 - 116

Screening - 32.

I. Citric acid production by *Aspergillus japonicus* - Effects of: Basal medium and salt concentration - 38; Incubation period - 45; pH - 48; Temperature - 52; Carbon nitrogen sources - 55; Phosphorus source, concentration and time of application - 61; Trace elements - 70; Alcohols - 74; Other experimental studies for citric acid production enhancement - 79. Production of citric acid by *A. japonicus* mutants - 81.

II. Fumaric and Tartaric acid production by *Rhizopus oryzae* - Experimental studies for Fumaric acid production - 83; Experimental studies for Tartaric acid production - 95. Effects of metallic ions, organic compounds and nature and concentration of medium ingredients on Fumaric and Tartaric acid productions by *R. oryzae* - 100; Evaluation of alternate carbohydrate sources for Fumaric and Tartaric acid fermentations - 102.
