LIST OF FIGURES

Figure 3.1  Microcontroller interface to phase control SCRs  .................................................. 32
Figure 3.2  Power MOSFET Driver circuit ................................................................. 35
Figure 3.3  Interface sub-units for linear control .......................................................... 39
Figure 3.4  Multimode power control unit .................................................................... 40
Figure 3.5  Microwave power absorbed (W) versus AC voltage to H.V. transformer (V) for multimode control system .......................................................... 43
Figure 3.6  Relation between temperature rise $\Delta t(\degree C)$ of the sample and radiation time (sec) for multimode control of the microwave drying system .................................................................................................................. 47
Figure 3.7  Relation between microwave power absorbed $P_{abs}$ (W) by the sample and radiation time (sec.) for multimode control of the microwave drying system .................................................................................................................. 47
Figure 3.8  Relation between load efficiency $\eta_l$ (%) of the microwave drying applicator and radiation time (sec) for multimode control .................................................................................................................. 48
Figure 3.9  Outline diagram of microwave drying applicator  ............................................ 50
Figure 4.1  Dimensionless moisture content versus radiation time (min.) for $P = 0.9$ W/g at $V_{air} = 1.5$ m/s .......................................................................................................................... 58
Figure 4.2  Drying rate (g/min.) versus radiation time (min.) for $P = 0.9$ W/g at $V_{air} = 1.5$ m/s .......................................................................................................................... 59
Figure 4.3  Sample temperature ($\degree C$) versus radiation time (min.) for $P = 0.9$ W/g at $V_{air} = 1.5$ m/s .......................................................................................................................... 61
Figure 5.1  Dimensionless moisture content (A) vs radiation time (min.) at different Power control modes .................................................................................................................. 76
Figure 6.1  Effect on soil microorganisms with microwave power of 600W for 1 kg BLACK soil at 15% moisture content.......................................................... 87
Figure 6.2  Effect on soil microorganisms with microwave power of 600W for 1 kg BLACK soil at 25% moisture content .......................................................... 88
Figure 6.3  Effect on soil microorganisms with microwave power of 600W for 1 kg BLACK soil at 40% moisture content .......................................................... 88
Figure 6.4  Effect on soil microorganisms with microwave power of 600W for 1 kg RED soil at 15% moisture content .......................................................... 89
Figure 6.5  Effect on soil microorganisms with microwave power of 600W for 1 kg RED soil at 25% moisture content .......................................................... 89
Figure 6.6  Effect on soil microorganisms with microwave power of 600W for 1 kg RED soil at 40% moisture content .......................................................... 90
Figure 6.7  Effect on soil microorganisms with microwave power of 600W for 1 kg MINERAL soil at 15% moisture content .......................................................... 90
Figure 6.8  Effect on soil microorganisms with microwave power of 600W for 1 kg MINERAL soil at 25% moisture content .......................................................... 91
Figure 6.9  Effect on soil microorganisms with microwave power of 600W for 1 kg MINERAL soil at 40% moisture content .......................................................... 91
Figure 6.10 Effect on soil microorganisms with microwave power of 900W for 1 kg BLACK soil at 15% moisture content .......................................................... 92
Figure 6.11 Effect on soil microorganisms with microwave power of 900W for 1 kg BLACK soil at 25% moisture content .......................................................... 92
Figure 6.12 Effect on soil microorganisms with microwave power of 900W for 1 kg BLACK soil at 40% moisture content .......................................................... 93
Figure 6.13  Effect on soil microorganisms with microwave power of 900W for 1 kg RED soil at 15% moisture content

Figure 6.14  Effect on soil microorganisms with microwave power of 900W for 1 kg RED soil at 25% moisture content

Figure 6.15  Effect on soil microorganisms with microwave power of 900W for 1 kg RED soil at 40% moisture content

Figure 6.16  Effect on soil microorganisms with microwave power of 900W for 1 kg MINERAL soil at 15% moisture content

Figure 6.17  Effect on soil microorganisms with microwave power of 900W for 1 kg MINERAL soil at 25% moisture content

Figure 6.18  Effect on soil microorganisms with microwave power of 900W for 1 kg MINERAL soil at 40% moisture content

Figure 6.19  Comparative heights (cm) of turmeric plants, where microwave treated water was used

Figure 6.20  Comparative heights (cm) of turmeric plants, where microwave treated turmeric seed rhizomes were used

Figure 6.21  Comparative heights (cm) of turmeric plants, where microwave treated soil was used

Figure 6.22  Protein (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.23  Fats (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.24  Ash (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.25  Moisture content (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.26  Curcuminoids (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.27  Carbohydrates (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.28  Uric acid (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.29  Weight loss (%) in turmeric fingers stored for 12 months untreated and with microwave treatment

Figure 6.30  Curcuminoids (%) in turmeric fingers during storage time (months) using conventional and microwave drying processes

Figure 6.31  Volatile oil (%) in turmeric fingers during storage time (months) using conventional and microwave drying processes

Figure 6.32  Carbohydrates (%) in turmeric fingers during storage time (months) using conventional and microwave drying processes

Figure 6.33  Ash (%) in turmeric fingers during storage time (months) using conventional and microwave drying processes

Figure 6.34  Moisture content (%) in turmeric fingers during storage time (months) using conventional and microwave drying processes

Figure 6.35  Chemical residue ppm in turmeric fingers during storage time (months) using conventional and microwave drying processes.

Comment [Z1]: Less than 0 – possible?? Start from 0 – as discussed
Figure 6.36 Curcuminoids (%) in turmeric slices during storage time (months) using conventional and microwave drying processes ................................................................. .......................... 116

### LIST OF TABLES

| Table 3. 1 | The microwave power absorbed (W) and AC input voltage to HV transformer. | 42 |
| Table 3. 2 | Observations for the multimode control microwave drying system. | 44 |
| Table 3. 3 | The relation between microwave powers absorbed (W), rise in temperature (°C), load efficiency (%) and radiation time (sec.) for multimode control microwave drying system. | 46 |
| Table 4. 1 | The dimensionless moisture content, drying rate (g/min.) and sample temperature (°C) at different radiation time (min.) for Integral Cycle Control Mode (IC-CM). | 54 |
| Table 4. 2 | The dimensionless moisture content, drying rate (g/min.) and sample temperature (°C) at different radiation time (min.) for Phase Control Mode (P-CM). | 55 |
| Table 4. 3 | The dimensionless moisture content, drying rate (g/min.) and sample temperature (°C) at different radiation time (min.) for Pulse Width Modulator Control Mode (PWM-CM). | 56 |
| Table 4. 4 | The dimensionless moisture content, drying rate (g/min.) and sample temperature (°C) at different radiation time (min.) for Linear Control Mode (L-CM). | 57 |
| Table 4. 5 | Moisture removal time (min.), maximum drying rate (g/min.) and maximum sample temperature (°C) for each mode with Vair = 1.5 m/s at both power density P = 0.9 W/g. | 62 |
| Table 4. 6 | Rehydration capacity (water gain %) of dried turmeric cubes for various control modes in the microwave drying system. | 64 |
| Table 4. 7 | Color parameters of dried turmeric rhizome cubes for various control modes. | 64 |
| Table 4. 8 | Sensory evaluation of the dried turmeric rhizome cubes for various control modes (averages of the ratings of five judges). | 64 |
| Table 5. 1 | Experimental values of dimensionless moisture content (A) with different power control modes at different radiation times (min.). | 75 |
| Table 5. 2 | Expected (B), experimental (A) values and percentage error at I-CM for different values of radiation times (min.) for K1=2.411955 and K2=0.039912 | 78 |
| Table 5. 3 | Expected (B), experimental (A) values and percentage error at P-CM for different values of radiation times (min.) for K1=1.723583 and K2=0.025115 | 79 |
| Table 5. 4 | Expected (B), experimental (A) values and percentage error at PWM-CM for different values of radiation times (min.) for K1=1.78617 and K2=0.021534 | 80 |
Table 5.5  Expected (B), experimental (A) values and percentage error at L-CM for different values of radiation times (min.) for $K_1=1.793115$ and $K_2=0.017597$.

Table 5.6  Values of drying constants ($K_1$ and $K_2$), average error, standard error, and regression for different power control modes

Table 6.1  Effect on soil microorganisms with microwave power of 600 W for 1Kg Black soil

Table 6.2  Effect on soil microorganisms with microwave power of 600 W for 1Kg Red soil

Table 6.3  Effect on soil microorganisms with microwave power of 600 W for 1Kg Mineral soil

Table 6.4  Effect on soil microorganisms with microwave power of 900 W for 1Kg Black soil

Table 6.5  Effect on soil microorganisms with microwave power of 900 W for 1Kg Red soil

Table 6.6  Effect on soil microorganisms with microwave power of 900 W for 1Kg Mineral soil

Table 6.7  Heights of the turmeric plants, where microwave treated water was used

Table 6.8  Heights of the turmeric plants, where microwave treated turmeric seed rhizomes were used

Table 6.9  Heights of the turmeric plants, where microwave treated soil was used

Table 6.10  Composition of constituents (%) of dried turmeric fingers stored for a duration of 12 months, with and without microwave treatment

Table 6.11  The constituents of turmeric fingers using conventional and microwave drying processes over a 15-month storage period

Table 6.12  The constituents of turmeric slices using conventional and microwave drying processes over a 15-month storage period

Table 6.13  The constituents of turmeric powder using conventional and microwave drying processes over a 15-month storage period

Table 6.14  Analysis of constituents of conventionally-dried and microwave-treated turmeric powder over a period of 24 months

Table 6.15  Cost analysis of turmeric product with conventional and microwave treatment
