ACKNOWLEDGEMENT

The author feels great pleasure in expressing his deep sense of gratitude and indebtedness to Dr. M. P. Ayyar, Reader in the Department, under whose esteemed guidance the present work has been completed. His absorbing interest, timely suggestions and useful discussions encouraged the author to pursue the problem steadily.

The author expresses his heart-felt thanks to Prof. V. C. Misra, Head of the Department, for his unvarying kindness and for providing encouraging facilities in the Department for the present study.

The author's thanks are also due to the Indian Council of Medical Research (ICMR) for awarding a Research Fellowship on the present problem.

The author is also very grateful to the Director of Health Services, Madhya Pradesh, Bhopal, to the Civil Surgeons, District Health Officers and the Superintendents of Hospitals of the region under study, for supplying the disease incidence data and other relevant information; he is equally grateful to the various private practitioners of the region and to the doctors of the Kasturba Hospital, H.E. Township, Bhopal, for their cooperation during disease survey.

The author's thanks are also due to the Director of the National Institute of Nutrition (ICMR), Hyderabad, for providing facilities of their library. The author is also
grateful to the Dean, Gandhi Medical College, Bhopal for providing library facilities.

The author is also grateful to all the teachers of the department for their encouragement and cooperation during all the stages of the work.

Finally, the author would like to express his sincere thanks to all those, in particular, the members of the interviewed families, who volunteered their help at various stages of this work.
