Acknowledgement

Over a period of almost four years, I have learnt a lot on scientific and personal levels. Basically being educated as chemist, there was almost every thing to learn or at least re-learn with greater detail. The experience was similar to that of a new born… in the field of materials where every new concept or technique was so vivid. I have enjoyed hands-on experience of many sophisticated equipments and analyzing data from many more. I pray that my ego remains so small and curiosity so high, that I continue to learn till the end. Without exaggeration I admit that all this would not have been possible without the guidance, cooperation and motivation of others. Each one who interacted with me during this period has a significant contribution. I am literally overwhelmed to find that each one of them was so beautiful inside to really aid me in any sense. There is no possible way to really acknowledge their contribution; however, I attempt to do so as a ritual demands.

First of all I am grateful to Prof. Tapas Chaudhuri, to give me an opportunity to work on such an interesting subject. He continuously prompted me to strive for more and better. He has been a flag bearer of learn by doing strategy and I thank him for inculcating the same seeds into me. Long discussions where he focused on the physical significance of a phenomenon or result rather toiling with numbers, were extremely insightful. I will always remember his practical sense about life as he says “ a bird in hand is better than two in the bush”. Besides passing on technical acumen, he imbibed lab culture, skills of presentation and technical writing. It is worth mentioning here at last, of his constant support on personal level of which not many knew.

I am indebted to Prof. Arabinda Ray. He has been like my guardian for last seven years. I was fortunate to have a glimpse of his enormous knowledge. Besides, a lot of science, I feel privileged to come across his humble and ever supportive nature.

Together, Prof. Tapas Chaudhuri and Prof. Arabinda Ray have given me an distinct and in-depth revelation of two extremes in material science i.e. experiment and theory.

I pay my sincere homage to late Prof. N. V. V. J. Swamy. I feel blessed to have even met him, let alone our long conversations which became a routine during his stay at Anand.
I am also thankful to Prof. R. M. Patel and Prof. R. V. Upadhyay for their support and guidance.

Much of my period here was accompanied by two of my very good colleagues, Kruti and Harshida. Together with them I enjoyed lot many discussions and I am really grateful for their help and motivation. In the later part, I was fortunate to learn many other aspects of life such as friendship and being part of a group. From the bottom of my heart I extend my sincere gratitude to my dear colleagues: Aniruddha, Nilesh, Amrita, Dweipayen, Alex, Sampark, Vamangi, Prasad, Vaishnavi, Piyush, Prashant, Kavita, Nidhi, Dhara, Vandana, Mitesh, Rekha, Deepak and Dhaval. I have learnt a lot about many other areas of science and clarified my own base from long discussions we had. The parties, night outs, mischief, the time of tears and delight with all my colleagues have given me everlasting cherished memories and made the journey a joyride.

I am also thankful to many seniors including Mitesh bhai, Amit bhai, Rucha mam, Anjana mam, Sachin bhai, Jayesh bhai, Sumesh bhai, Bhavin bhai, Kinnari mam and Jaymin bhai for their continuous support and inspiration.

Additionally, a special thanks to Rakesh bhai, Accounts and Administration staff, faculties at Bioscience and Chemical science and also to Harish bhai.

I express my gratitude to UGC-DAE-CSIR, Indore, for funding as the work included in thesis is a part of a collaborative research scheme, especially to Dr. T. Shripathi and Dr. U. Deshpande.

Lastly, this endeavor would not have been possible without the unconditioned love and blessings from my family. I take this opportunity to acknowledge Mamma, Papa, Anuj Bhaiya, Ritu Bhabhi, Mona and Kirti didi, my brother-in-laws Pushpen ji and Rinku ji and lovely nephews and nieces: Midu, Nishu, Shona, Anshu and Aadu.
