**LIST OF TABLES**

**Table 4.1:** Physico-chemical characteristics of pulp-paper mill effluent

**Table 4.2:** The analyses of synthetic lignin (1 g/l)

**Table 4.3:** Characteristics of sludge which are used for bacterial isolation. **Table 4.4:** Selection of bacterial culture on increasing concentrations of lignin. **Table 4.5:** Biochemical tests of cut off bacterial strains isolated from sludge sample.

**Table 4.6:** Bacterial degraded lignin samples in single and mixed condition and their response on reduction of different pollution indicators.

**Table 4.7:** Chemical characteristics of pulp-paper effluent.

**Table 4.8:** Skeleton of design of experiment according to CCD-RSM.

**Table 4.9:** Compound identified as trimethylsilyl (TMS) derivatives from untreated control and treated bacterial samples.

**Table 4.10:** The circumstances for construction the toxicity test with *Tubifex tubifex*.

**Table 4.11:** Percent mortality, LC50 and their 95% confidence limit for *T. tubifex* at different concentration of undegraded pulp and paper mill effluent after 96 hrs bioassay.

**Table 4.12:** DNA damage in *Saccharomyces cerevisiae*, depending on and percentail DNA for untreated and treated pulp paper mill effluent.
